ACKNOWLEDGEMENT

Words are sometimes hard to find when you are acknowledging the kind help and guidance of innumerable people working behind the curtain, to complete a work so priceless and giving honour and gratitude to those who are a constant source of inspiration in every sphere of life. This work is the result of long hours of hard work and constant constructive criticism of innumerable hands and minds.

It was my proud privilege and opportunity to work under the guidance of Prof. Dheer Singh, Director and Head, Institute of Food Technology, Bundelkhand University, Jhansi. His constructive criticism, keen attention to daily work and indispensable advice proved to be a backbone to this work. His dynamic and affectionate nature instilled in me the confidence and enthusiasm to complete this work, which was initially looking like a ‘ghost’ to start with.

I shall always be indebted to honorable vice chancellor of Bundelkhand University Prof. R.P. Agarwal, for giving me an opportunity to do this work.

Words of sincere thanks are also extended to my co-guide, Dr. Sanjaya Sharma, Head, Dept. of Obstetrics and Gynecology, M.L.B. Medical College, Jhansi for providing me the subjects for the study and for her generous advice as and when needed.

I wish to thank Dr. Meenakshi Singh, Head, Institute of Home Science, Bundelkhand University Jhansi and my seniors, Dr Pratibha Arya, Chanda Didi and friend Richa for their indispensable help and constant encouragement whenever I was in need of it. Their cooperative and loving nature provided me a
congenial environment to work and was of immense value in completing this piece of work.

It would be guilty on my part if I do not acknowledge the cooperation and help given to me by Mr. Sanjeev Sharma, for guiding me to perform the radiological test used in this study. I also thank the management of Jhansi Orthopedic Hospital and Roosia pathology for providing me the facility for radiological and biochemical test used in this work.

I would always be indebted to my family for standing by me like pillars and providing me support and guidance whenever I was in need of it. I am highly gratified to my mother, who was my inspiration for this work. Without the untiring efforts of my father this work would have been left incomplete. The constant words of encouragement of my brother were of immense support to me during the course of the study.

Finally, Mr. Rafat Jamal, whose promptness and untiring efforts in bringing this piece of work in this presentable form receives my sincere thanks. I offer my sincere prayers to God for providing me the strength and determination to complete this work.

Lastly the subjects of this study are specially, acknowledged without whose cooperation this study would not have been possible.

This work is an effort in service of women to help them not only to live longer but also to live healthier in their 'wise women years.'
