ACKNOWLEDGEMENT

I express my gratitude to my advisor Dr. Salma Ahmed of Aligarh Muslim University for her guidance and support all along this journey and devoting much time to reading my work over and over again. Her special interest and knowledge enabled her to give me the right guidance and also provided me with much needed motivation. Our meetings were not only of great importance for the development of my research, they were also essential in that they kept me inspired and, at times, helped me regain the confidence that it would all come to a good end. I thank her for always making time in her very busy agenda to talk about new ideas, to take a quick look at something or, at times, to listen to my frustrations. Her comments along the way were of great help and her optimistic view on things always made me carry on with confidence. She was always able to sharply rephrase something that I could only describe in a vague and long-winded way. This really helped me to collect my thoughts.

I also thank my external advisor Dr. Sridhar Panda for taking the time to help me in guiding into the writing of this thesis. From him, I have learned the importance of producing a good piece of work and putting into it the very best that you have. Without his guidance and persistent help this dissertation would not have been possible.

I would like to express the deepest appreciation to Prof. M. Khalid Azam and Dr. Asif Akhtar of Aligarh Muslim University whom I frequently bothered for advice on a number of topics, during my visits to AMU, despite having no formal mentor/mentee relationship with them. Their advice ranged from detailed methodological/statistical advice to suggestions on how to improve my work. They helped me navigate life as a Ph.D. student, and so they deserve to be thanked.

I acknowledge and extend my heartfelt gratitude to the whole staff of AMU who made me feel at home whenever I visited AMU.

A warm thank you goes to my family and friends for always supporting me, for listening to my complaints in stressful times, and for understanding when I was physically and/or
mentally absent. I thank my parents and my sister Richa for always believing in me and for their unending love, support and encouragement. I take this opportunity to give a very special thank you to my mother for being such a warm and caring person, for always being there for me. I would like to thank my husband for his love, support and patience during the past years it has taken me to graduate. Words alone cannot express what I owe them for their encouragement and whose patient love enabled me to complete this thesis.

A special note of thanks to Sayantan for going the extra mile with the kind of feedback that put flesh on the bones, and for all his help and assistance with this project. Last but not least, I would like to thank my colleagues at Cargill India Private Limited, for bearing with me and supporting me to work on my thesis.

And especially to God, who made all things possible; for being my strength and guide in the writing of this thesis. Without Him, I would not have had the wisdom or the physical ability to do so.

During this research, associates in both the business and academics fields have contributed a lot and I take this opportunity to show my gratitude to them all. Despite all these sincere efforts, and energetic help by many others, it is quite possible that some errors may appear, and it goes without saying that these errors are the responsibilities of the researcher.
