ACKNOWLEDGEMENT

“Gratitude is the inward feeling of kindness received.
Thankfulness is the natural impulse to express that feeling”

First and foremost, I would like to thank my greatest teacher of all: God. I would like to thank my beloved guide Dr. M. Srinivasan Professor, CAS in Marine Biology, Annamalai University, for filling up my mind with matters of knowledge. I thank him for his diligent guidance, persistent effort, precious suggestions and constant encouragement throughout my research. I thank him for all his care and affection.

I am extremely grateful to Prof. K. Kathiresan, Dean and Director, CAS in Marine Biology, Annamalai University, for his valuable advice in the accomplishment of this study.

My sincere thanks to Prof. T. Balasubramanian, former Dean and Director, CAS in Marine Biology, Annamalai University, for giving me a great opportunity to carry out research in this prestigious centre.

I am extremely grateful to Prof. L. Kannan, former Vice Chancellor, Thiruvalluvar University. I must thank Prof. S.A. Ajmal Khan, Prof. N. Veerapan, Prof. A. Shanmugam and Prof. P.S. Lyla for their help and advice. I also thank Dr. P. Anantharaman, Associate Professor for his support and encouragement. I would like to thank Dr. S. Saravanan, Assistant Professor, CAS in Marine Biology, Annamalai University, for his valuable evaluation of the reference section in this thesis. I thank all the Professors, Associate Professors, Assistant Professors, members of Instrumentation laboratory, Library, Hostel and Non-teaching staff of CAS in Marine Biology, Annamalai University for their co-operation to complete my thesis.

My special thanks to Dr. S.T. Somasundaram, Associate professor, CAS in Marine Biology, Annamalai University, for providing all the necessary facilities to carry out my research. I am deeply gratified for his invaluable guidance, meticulous effort in procurement of research materials, scholarly advice and freedom, priceless comments and discussion in every phase of my research.

I thank the Department of Biotechnology (DBT) for their financial assistance during my study period.
I would like to thank my colleagues, Dr. K. Indhira, Ms. N. Jayaprabha, Mr. M.P. Arulmoorthy, Mr. A.C. Ratheish, and Mrs. E. Karunya for their co-operation. I also thank all other friends outside CAS who helped me to do my work successfully. My sincere thanks to Dr. Sivagama sundari for her guidance, support and encouragement.

It’s my pleasure to thank my friends a lot. It is my fortune to have such friends for a lifetime. I limit, in not mentioning any of my friends name since there are many friends who helped me. I thank all my seniors and juniors for their support. Thanks a lot to all Research Scholars in CAS.

I thank my parents, Mr. Gunasekar and Mrs. Kala Gunasekar, my sister Mrs. Chilambarasi Balamurugan, my sisters beloved son Nithin, My brother Mr. G. Thinakaran and in law Mrs. Sindhu and all my family members for encouraging me to strive to do my best. I thank them for everything. I thank my mother in law and father in law for their support as well.

Finally, I would like to thank my husband Dr. R. Vignesh and my little princess V. Mahathi for their understanding which made me work better. Their support and encouragement is highly appreciable which made this thesis meaningful.

Chapter 1

1. **General Introduction**

   1.1 Salinity Stress tolerances
   1.2 Halophytes
   1.3 Chenopodiaceae
   1.4 Phytohormones
   1.5 Abscisic Acid
   1.6 **Objectives of the study**

Chapter 2

2. **Review of literature**

   2.1 Molecular identification with 18SrRNA
   2.2 Threshold concentration of salinity and abscisic acid on germination
   2.3 Abscisic acid pretreatment effects on growth and osmolyte accumulation
   2.4 Abscisic acid pretreatment on the antioxidant activity
   2.5 Proteomic approaches on identification of salt tolerant protein
   2.6 *In-silico* analysis salt responsive protein of SKP1-like protein 1A

Chapter 3

3. **Description of the study area and species**

   3.1 Description of the study area
   3.2 Description of study species
      3.2.1 Halophytes
      3.2.2 Characteristics of Halophytes
      3.2.3 *Suaeda maritima*
      3.2.4 Classification

Chapter 4

4. **Molecular identification and phylogenetic analysis of *Suaeda maritima* using 18S rRNA**

   4.1 Introduction
   4.2 **Materials and Methods**
      4.2.1 Isolation of Genomic DNA
      4.2.2 Quantitation and Quality Assessment of DNA
4.2.3 Polymerase Chain Reaction ......................................................... 34
4.2.4 Visualization of PCR Product ..................................................... 35
4.2.5 Purification of PCR product ....................................................... 35
4.2.6 Sequencing of Purified 18S rRNA Gene Segment ......................... 35
4.2.7 Cycle Sequencing ................................................................. 36
4.2.8 Electrophoresis and Data Analysis ............................................ 36
4.2.9 Sequence analysis ............................................................... 37
4.2.10 Multiple sequence alignment using Clustal W ......................... 37
4.2.11 Phylogenetic tree construction using MEGA .......................... 37
4.2.12 Bootstrapping .................................................................... 38

4.3 Results ....................................................................................... 39
4.3.1 Wet Lab methodology ............................................................ 39
4.3.2 Electrophoresing PCR amplicons .......................................... 39
4.3.3 Sequence analysis ............................................................... 40
4.3.4 Dry lab methodologies .......................................................... 41
4.3.5 Accession numbers ............................................................... 42
4.3.6 Multiple Sequence Alignments ............................................. 42
4.3.7 Evolutionary relationships of taxa by Neighborhood joining Method 43

4.4 Discussion ............................................................................... 45

Chapter 5

5. Prediction of threshold concentration of salinity and abscisic acid on germination, water content and solute composition of Suaeda maritima ................................................................. 47

5.1 Introduction ............................................................................... 47
5.2 Materials and Methods ............................................................. 49
5.2.1 Sample preparation for NaCl and ABA treatment ....................... 49
5.2.2 Estimation of Water Content (WC) ........................................ 51
5.2.3 Estimation of chlorophyll content ......................................... 52
5.2.4 Estimation of proline content .............................................. 52
5.2.5 Estimation of Glycine betaine content ................................... 53
5.2.6 Leaf Protein extraction and estimation ................................... 53
5.2.7 SDS-PAGE protein resolution ............................................ 54

5.3 Results ....................................................................................... 55
5.3.1 Effect of salinity on seed germination ..................................... 55
5.3.2 Effect of salinity on seed protein profiling ............................. 55
5.3.3 Effect of salinity on time dependent changes of leaf protein profiling .... 56
5.3.4 Effect of exogenous ABA on Water content .......................... 57
5.3.5 Effect of exogenous ABA on protein content ......................... 58
5.3.6 Effect of exogenous ABA on chlorophyll content .................. 59
5.3.7 Effect of exogenous ABA on proline and Glycine betaine content .... 59
5.3.8 Effect of exogenous ABA on leaf protein profiling ................ 61

5.4 Discussion ............................................................................... 62
Chapter 6

6. Effect of exogenous abscisic acid pretreatment on growth, water relations, organic and inorganic osmolyte accumulation in the halophyte *Suaeda maritima* under salinity stress

6.1 Introduction

6.2 Materials and Methods

6.2.1 Collection of plant seeds and growth condition parameters
6.2.2 Fresh and Dry Weight
6.2.3 Relative Water Content (RWC)
6.2.4 Ion determination
6.2.5 Chlorophyll content
6.2.6 Total free amino acids
6.2.7 Lipid peroxidation
6.2.8 Proline content
6.2.9 Glycine betaine content

6.3 Results

6.3.1 Effect of exogenous ABA on Fresh and Dry weight
6.3.2 Effect of exogenous ABA on Relative Water Content
6.3.3 Effect of exogenous ABA on Ion determination
6.3.4 Effect of exogenous ABA on Chlorophyll content
6.3.5 Effect of exogenous ABA on Total free amino acid
6.3.6 Effect of exogenous ABA on Lipid peroxidation
6.3.7 Effect of exogenous ABA on Proline content
6.3.8 Effect of exogenous ABA on Glycine betaine content

6.4 Discussion

Chapter 7

7. Impact of exogenous abscisic acid pretreatment on the antioxidant activity of *Suaeda maritima* under salinity stress

7.1 Introduction

7.2 Materials and Methods

7.2.1 Extraction and analysis of antioxidant enzymes
7.2.2 Superoxide Dismutase Assay
7.2.3 Catalase assay
7.2.4 Peroxidase assay
7.2.5 Ascorbate Peroxidase assay
7.2.6 Glutathione S Transferase assay

7.3 Results

7.3.1 Effect of exogenous ABA on SOD activity under salinity stress
7.3.2 Effect of exogenous ABA on CAT activity under salinity stress........ 93
7.3.3 Effect of exogenous ABA on POX activity under salinity stress......... 94
7.3.4 Effect of exogenous ABA on APX activity under salinity stress........ 95
7.3.5 Effect of exogenous ABA on GST activity under salinity stress......... 96

7.4 Discussion......................................................................................... 97

Chapter 8

8. Proteomic approaches on isolation and identification of salt tolerance proteins regulated by abscisic acid pretreatment under salinity stress in the halophytic plant Suaeda maritima ................................................................. 100

8.1 Introduction...................................................................................... 100

8.2 Materials and Methods................................................................. 104
8.2.1 Total protein extraction and estimation....................................... 104
8.2.2 Quantification of Proteins........................................................ 104
8.2.3 Protein profiling through SDS-PAGE........................................ 104
8.2.4 Protein Separation via isoelectric focusing......................... 107
  8.2.4.1 One dimensional electrophoresis..................................... 107
  8.2.4.2 Two dimensional electrophoresis.................................... 107
8.2.5 Protein identification by MALDI TOF/TOF MS...................... 107
  8.2.5.1 Washing of gel pieces.................................................. 108
  8.2.5.2 Reduction and alkylation.............................................. 108
  8.2.5.3 In gel digestion.......................................................... 108
  8.2.5.4 Extraction of peptides................................................ 109
  8.2.5.5 MS analysis and protein search.................................... 109
  8.2.5.6 Peptide mass finger printing..................................... 109
  8.2.5.7 Mascot search.......................................................... 110

8.3 Results ............................................................................................ 111
8.3.1 Leaf protein profiling through SDS-PAGE............................. 111
8.3.2 Leaf proteomic responses....................................................... 112
8.3.3 Protein spot identification...................................................... 117

8.4 Discussion....................................................................................... 119

Chapter 9

9. In-silico prediction of structural and functional aspects of salt responsive protein of SKP1-like protein 1A................................................................. 122

9.1 Introduction..................................................................................... 122

9.2 Materials and methods............................................................... 124
  9.2.1 Sequence analysis............................................................ 124
  9.2.2 MOTIF search................................................................. 124
  9.2.3 Conserved domain search............................................... 124
  9.2.4 InterPro based protein signature recognition analysis.......... 124
9.2.5 ProtParam based physical and chemical computation in protein sequence ................................................................. 124
9.2.6 Secondary structure prediction ........................................... 125
9.2.7 Tertiary structure prediction ................................................ 125
  9.2.7.1 Homology modeling ...................................................... 125
  9.2.7.2 Model structure validation ............................................ 125
  9.2.7.3 Structure visualization ................................................ 125
9.3 Results and Discussion .......................................................... 126
  9.3.1 Sequence analysis .......................................................... 126
  9.3.2 MOTIF search ............................................................... 126
  9.3.3 Conserved domain search .............................................. 127
  9.3.4 Integrated protein signature .......................................... 127
  9.3.5 Physicochemical properties of the protein ......................... 128
  9.3.6 Secondary structure prediction ........................................ 131
  9.3.7 Tertiary structure prediction .......................................... 132
  9.3.8 Tertiary structure of SKP1-like 1A .................................... 136
10. Summary and Conclusion ...................................................... 137
11. References ............................................................................. 144
12. List of Publications ............................................................... 184
