Acknowledgment

First and foremost, I owe it all to the Almighty ALLAH for granting me the wisdom, health and strength to undertake this research task and enabling me to bring it to its completion.

I would like to express my sincere gratitude to my supervisor Dr. Syed Mashhood Ali for guiding, supervising and providing me with thoughtful insights in the understanding of the subject. I feel short of words to acknowledge his systematic research approach that helped me to understand the basics and concepts of the field of research. Without his able guidance, scholarly inputs and consistent encouragement surely this work would have been incomplete.

A special thanks to the Chairman, Department of Chemistry, A.M.U. Aligarh, for providing me necessary research facilities at the department to carry out the research work. I would also like to extend my sincere gratitude to all teaching and non-teaching staff of the Department of Chemistry for their help and assistance. The help received from Mr. Riyasat Ali and Mr. Rashid Y. Kamal is greatly acknowledged and appreciated.

I pay special thanks to our collaborator Prof. P. R. Rajamohan, National chemical laboratory (NCL), Pune, India. Thanks also goes out to Mr. Avtar Singh and Mr. Manish Kumar, Sophisticated Analytical Instrumentation Facility (SAIF), Chandigarh, India for the NMR analysis of the samples. This thesis would not have come to a successful completion without the generous help received from the drug companies: Geertrui Haest, Ceresar Application Centre, Food & Pharma Specialities, France, Nebula Healthcare, India, Bachem AG, Switzerland, Lincoln Pharmaceuticals Ltd., India and P. I. Pharmaceuticals (P) Ltd., India from where the pharmaceutical compounds were obtained. The financial assistance in the form of non-NET fellowship and SRF rendered by the University Grants Commission and Council for Scientific and Industrial Research, New Delhi, Govt. of India are greatly acknowledged.
Thanks also goes out to my friends, research colleagues and roommates who were with me throughout this journey. I am thankful to Iram Shahwar, Khushruuda Bano, Shania Khan, Shazia Shamim, Nida Qutub, Aiman Ahmad, Himani Varshney, M. Afzal, Dr. Prashant, Darakhshan, Bushra Alvera, Afshan, Mahino who filled my world with the charms of their unique personalities. My special thanks go to my dear friend Aliya Nusrat who filled the gaps in my personality through many invisible marks. The suggestions and guidance received from Dr. M. Shuhid and Dr. Arif Siddique is highly valued.

I don’t have words to express my humble gratitude towards my family, whose relentless and unending support helped me to fulfill this ambition. I express my deepest veneration towards my parents for their unconditional love, wishes and support. I owe a lot to my mother Mrs. Firoza Bano, who has encouraged and helped me at every stage of my personal and academic life. I deeply miss my father Mr. Amanullah Azmi who is not with me today to share this joy. The unrelenting support and blessings of my parents has made me to follow and chase my dream. I feel honored to thank my sister Mrs. Afroz Fatma and my brother Mr. Fazlullah Azmi who stood by me through every painful and happy moment and made me believe that my world is empty without them. Their constant and unconditional faith in me has really contributed in the culmination of this work. This acknowledgement would have been incomplete without the mention of my husband Mr. Azhar Jamal, parents in-law, Mrs. Vakeelun Nisa and Prof. M. lmdad for embarking with me on this adventure. Their patience, understanding, unconditional love and support helped me to venture the tour of PhD which cannot be described in words.

Thank you everyone. I could not have made without you all.

KEHKESHAN FATMA
