List of figures

Fig.1.1: Neurospora growing in the wild. 1A
Fig.1.2: Schematic representation of the life cycle of *Neurospora crassa* 2A
Fig.1.3A: Structure of a mature perithecium of *N. crassa* 3A
Fig.1.3B: Meiosis, ascospore delimitation and development in the heterothallic spp. *N. crassa* 4A
Fig.1.3C: Meiosis, ascospore delimitation and development in the pseudohomothallic spp. *N. tetrasperma*. 4B
Fig.1.4: Proposed model for quelling in *N. crassa*. 7A
Fig.1.5: RIP in Neurospora 8A
Fig.1.6: Models to explain the conversion of G:C to A:T. 9A
Fig.1.7: Phenotype of the *erg-3* mutant ascospore colony on sorbose medium. 10A
Fig.1.8: Proposed model for meiotic silencing by unpaired DNA (MSUD). 16A
Fig.1.9: Suppression of ascus-dominant phenotypes by semi-dominant mutations for meiotic silencing. 17A
Fig.3.1: Generation of a chromosome segment duplication from a translocation by normal sequence cross 44A
Fig.3.2: Construction of *Dp(AR18)* strains 46A
Fig.3.3A: Construction of *Dp(B362i)* strains 46C
Fig.3.3B: Identification of duplications from the cross *T(B362i)* *A* x *1110 a* 46D
Fig.3.4A: Junction fragment of a translocation breakpoint 46E
Fig.3.4B: Barren progeny from the cross *ORA* x *T(B362i)* *A* and *ORA* x *T(B362i)* *a* as analyzed by Southern hybridization to identify duplications. 46F
Fig.3.5A: Construction of *Dp(B362i); Dp(erg-3)* strains for *cis* crosses with *Sad-1* 47A
Fig.3.5B: Hygromycin-resistant progeny from the crosses of *Dp(B362i)* *A* #3, #8 and #10 each with *Sad-1; Dp(erg-3/1)* screened for the presence of the ectopic copy of the *erg-3* gene. 47B

vii
Fig. 3.5C: Progeny from the crosses of $Dp(B362i)\ A\ #\ 3,\ #\ 8$ and $\#\ 10\ each$ with $Sad-1; Dp(erg-3/1)\ a$ analyzed on a Southern blot for identifying duplications.

Fig. 3.6A: Segregation of markers associated with the translocation chromosome among the duplication progeny.

Fig. 3.6B,C: Detection of coverage of markers by RFLP analysis.

Fig. 3.7: Estimating the size and extent of duplications.

Fig. 3.8A-E: Genomic Southern data for coverage of markers for the duplication $Dp(AR17)$.

Fig. 3.9A-E: Genomic Southern data for coverage of markers for the duplication $Dp(B362i)$.

Fig. 3.10A-E: Genomic Southern data for coverage of markers for the duplication $Dp(IBj5)$.

Fig. 3.11A-E: Genomic Southern data for coverage of markers for the duplication $Dp(OY329)$.

Fig. 3.12A: RFLP between translocation and OR strains at the breakpoint region.

Fig. 3.12B: Identification of duplications in the OR background using RFLP at the breakpoint region.

Fig. 3.13A: RIP-induced $dow$ mutants from wild-type by $erg-3; Dp(dow)$ cross.

Fig. 3.13B: Southern blot of hygromycin-resistant $erg-3$ mutant progeny from the cross $Sad-1\ A\ x\ erg-3; Dp(dow/1)\ a$.

Fig. 3.14: $dow$ mutants from $Dp(AR17)$ by $erg-3; Dp(dow)$ cross.

Fig. 4.1A,B: Confirmation of the presence of $Dp(erg-3/1)$ and $Dp(dow/1)$ transgenes by Southern analysis.

Fig. 4.2: Construction of the $Dp(B362i); dow; Dp(erg-3/1)$ strain.

Fig. 4.3: Southern analysis of $dow$ mutants from the cross $T(B362i)\ A\ x\ dow\ #\ 4\ a$

Fig. 4.4: Southern blot analysis of hygromycin-resistant progeny from the cross $T(B362i); dow\ x\ dow; Dp(erg-3/1)$ to identify duplications.
