Acknowledgement

With profound gratitude, I express my sincere thanks to my research supervisor Prof. Dr. A. Narayanasamy who introduced me to the field of nanocrystalline magnetic materials. No word in the dictionary can express the help he rendered in assisting me to understand all aspects of magnetism and magnetic materials and in shaping this thesis. Promptness is a unique characteristic of him and his health conditions in no way could detour from discussions. I am hopeful that his credentials could be utilized to publish books on magnetism and Mössbauer effect.

I am grateful to Dr. B. Jeyadevan, Tohoku University who trained me in the chemical synthesis of nanomagnetic materials. I would like to appreciate his tireless efforts in making me understand the concepts with good humour. I am also thankful to Prof. Dr. K. Tohji for active collaboration between University of Madras and Tohoku University which made it possible for me to visit Tohoku University and complete this thesis by making use of his research facilities.

I wish to express my sincere thanks to Prof. Dr. P. R. Subramanian, Head of the Department of Nuclear Physics who advised me on technical points.

I am thankful to Prof. Dr. R. Krishnan, Laboratoire de Magnetisme et d’Optique, whose experience in the field of magnetism has been utilized by me in the understanding of magnetic phenomenon in garnets. His tireless efforts in visiting the Department of Nuclear Physics and inspiring the students with his long term experience and knowledge in magnetism are greatly appreciated. I am thankful to Dr. M. Guyot for providing the bulk garnets.

Frutiful collaboration with Prof. Dr. L. K. Varga, Hungarian Academy of Sciences helped me a lot. I am grateful to him for making the Nd-Fe-B melt-spun ribbons immediately whenever I send the ingots.

Group discussions would help any one to clear doubts and the magnetism Lab in the Defence Metallurgical Research Laboratory (DMRL) is one such place which I would like to mention. I am thankful to Dr. V. Chandrasekaran, Group Head, Dr. R. Gopalan, Dr. S. Pandian and all the other staff of DMRL for sharing their expertise on rare earth permanent magnetic materials.

My thanks are due to Prof. Dr. K. Chattopadhyay, Department of Metallurgy, Indian Institute of Science (IISc) for extending the facilities available with him. He always extends a warm welcome to IISc for collaborative research work. Data collection is an important part of research and I sincerely acknowledge Prof. Dr. A. K. Nigam, Tata Institute of Fundamental Research for the SQUID measurements.

A special mention has to be made to my senior and friend Dr. C. N. Chinnasamy who taught me to handle the research equipment and putting me in good mood. I also thank all the group members of the Graduate School of Environmental Studies, Tohoku University especially Dr. K. Shinoda, Dr. Y. Sato, Mr. K. Atsumi, Mr. Hinotsu, Mr. Urakawa and Mr. Kakibe who helped me during my stay in Tohoku University.
I also wish to acknowledge the help I received from Dr N. Ponpandian in the form of discussions and suggestions. I would like to mention that all of my seniors in this Department had helped me in one way or the other during my research career. Dr M. Manivel Raja, who participated in the discussions, was one among them. The others are Dr R. N. Viswanath, Dr S. Arunagiri, Dr A. Chandra Bose, who guided me from cycling to flight, Dr B. Latha, during equipment services, Dr R. Ramamurthy who spared his time for equipment spare parts, Dr I. Manjubala for scheduling my time, Dr B. Tamalika for guiding through conferences and Dr K. Santhakumar for his moral support. The discussions and timely help rendered by Mr S. Amirthapandian during literature survey throughout my research career were very much useful to me. I also thank Dr K. Ganesan for discussions during his visit to the Department of Nuclear Physics.

I acknowledge the help received from Mr D. Prabhu and Mr N. Sivakumar during data collection and discussions which made my task easy. I thank Mr B. Soundaranagan whose technical skills helped me in the maintenance of equipment and Dr Premanand for debugging the Mössbauer program.

Working in the Department of Nuclear Physics has been made in a friendly environment through the members of the faculty Prof. Dr S. Ramasamy, Prof. Dr V. Ravichandran and Dr A. Stephen. I would like to specially thank Mr K. Ravichandran for his help in thermal measurements, Dr C. Venkateswaran for providing analysis softwares and Dr. K. Sivaji for software troubleshooting.

My colleagues and friends at the Department of Nuclear Physics have to be thanked for their discussions in the MAGCRYCER series of weekly talks. I thank Mr P. Thangadurai, Mr D. Prakash, Mr K. Padminprasad, Mr S. Selvakumar, Mr V. Sabarinathan, Mr I. Baskaran, Mr E. Thirumal, Ms B. Vigneswari, Mr D. Paul Joseph, Mr P. Santhanaraman, Mr H. Shankar, Mr E. Viswanathan and Ms R. Kalavani for friendly discussions.

My sincere thanks for the help received from the non-teaching staff Mr R. Sudarsanam, Mr B. Nagarajan, Mr R. Shanmugam, Ms Sunitha Perumal, Ms P. Indumadhi and Mr K. Lazarus.

It is a pleasure for me to associate with Dr V. Masilamani, who encouraged me and ignited my mind on the applications of research to the community. I also thank Dr. S. Ganesan, Department of Physics, Anna University and all the faculty and research scholars during my short period of stay there.

I thank all the scientists particularly Dr Steen Mørup, Dr H. Kronmüller, Dr D. J. Sellmeyer and Dr M. Venkatesan for their clarifications at crucial moments. I also thank Dr Dino Fioroni, CNRS and his group for their help during ICM2003.

I thank the University Grants Commission for their funding in the form of UGC SAP and major research project. The Senior Research Fellowship offered by the Council of Scientific and Industrial Research is acknowledged. I also acknowledge the Japanese Government for the fellowships offered during my visit to Tohoku University.

Parents never expect thanks from their wards, but I wish to thank my parents, Rev. Fr. Dr. M. Elias and my relatives for their support.

(R. JUSTIN JOSEYPHUS)
