ACKNOWLEDGEMENT

With heart brimming with joy it is not easy to thank someone who is the essence of my aspiration. I am indebted to my research supervisor, Dr. Sanjay Kumar Srivastava, Professor, Department of Mechanical Engineering, Dayalbagh Educational Institute (D.E.I.), Agra, for his guidance and kindness throughout this work. He has been a perennial source of inspiration for me and I have learnt from him on general research and specific subjects related to this thesis. His innovative ideas, knowledge about the subject and human values have impressed me. Without his help and support at various stages of this work, this thesis would not have assumed its final shape. He is also acknowledged for the critical reading of this manuscript. For Prof. Srivastava, all I can say is that he has been (and will always be) much more than just a research supervisor to me.

I extend my special thanks to my co-supervisor Dr. Kamal Srivastava, Associate Professor, Department of Mathematics, for her invaluable ideas, kindness, and help in various activities throughout this work, specially for helping me to understand MATLAB programming and NSGA-II algorithm. In particular, I owe my gratefulness to her and my research supervisor for letting me use and understand their original work on hybrid metaheuristic (HMH) for solving some of the problems in this thesis.

My deep sense of gratitude is due to Prof. P. K. Kalra, Director, D.E.I., for providing the ambience of quality research work in the Institute.

I am sincerely thankful to Prof. V Prem Pyara, Dean, Faculty of Engineering, for providing me all facilities to carry out this research work.

I profoundly thank Prof. D. S. Mishra, Head, Department of Mechanical Engineering, Faculty of Engineering, for his generosity and encouragement while carrying out this research work.
My humble thanks are also due to Prof. Ranjit Singh, Department of Mechanical Engineering, and Prof. P. K. Saxena, Ex-Head, Department of Mechanical Engineering, for providing me foundation at the initial stage in such a diverse research area. I would also like to thank my colleagues Prof. S. K. Gaur, Prof. K. Hans Raj, Prof. Rahul Caprihan, Prof. V. Soami Das, Prof. D. G. Rao, and Dr. R. S. Sharma for their help and support during these years. I must not forget to thank Mr. Ankit Sahai, Mr. Anami Saran, Mr. B. K. Satsangi, Dr. Ashok Yadav, Mr. Rajeev Yadav and Mr. Sushil Satsangi, whose company always made me feel relaxed during the research work.

I express my most heartful acknowledgements to my mother Mrs. Rekha Devi, who has been a constant source of inspiration and blessings throughout this work. It is my great pleasure to place on record my warm thanks to my brother, Mr. Chetan Anand and my sisters Mrs. Monika Singh and Mrs. Palak Prasad, for their blessings and love. My hearty thanks are also due to my in-laws, especially Mr. Parshuram, Mrs. Raja Beti, Mr. Om Prakash, Mrs. Sunita, Mr. Om Pal, Mr. Madhuban, Mr. Keshav, Mr. Ramesh, and Mr. Surendra, for supporting me and encouraging me with their best wishes.

My gratitude would not be complete without recalling the love and affection of my wife Mrs. Neeta Anand and our beloved son Mr. Namoh Anand for their love, patience and encouragement. Inspite of having spent a considerable time in my research work, they showered their love and affection throughout the work.

I also acknowledge the support by Major Research Project, UGC, New Delhi (India) under Grant F. No. 36-65/2008 (SR), dated 24/03/2009. Last but not least, I wish to express my thanks to all those who were directly and indirectly involved in the completion of this thesis.

Date: 20-09-13

(Yogesh Kumar Anand)
