ACKNOWLEDGEMENT

This is the most opportune moment to convey my heartfelt gratitude to all the institutions and individuals from whom I have received invaluable support and help in the course of carrying out the research work presented in this dissertation.

First and foremost I want to thank my supervisor and express immense gratitude for the faith that she bestowed on me. Her guidance and constant encouragement has made this work possible. I have benefited remarkably from her advice and exceptional generosity with time. She ensured that I paid meticulous attention to detail, and always encouraged me to see the broader picture. Her patience and confidence in me that I can accomplish the tough tasks made me work harder. She continuously supported my PhD study and research. I am sincerely very thankful to her for her patience, motivation, enthusiasm, and immense knowledge. Her guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my PhD study.

The person who has silently provided me as much encouragement and support and who has believed in my capabilities as much as my supervisor is Prof. Sarmila Banerjee. She was the Convenor of the PhD committee when I had appeared for the entrance interview at Calcutta University. Although I had an academic hiatus of more than a decade yet she gave me the opportunity to pursue the degree. Her support right from the interview, registration and the pre-submission public seminar has meant a lot to me. I want to express sincere and heartfelt gratitude to her.

This study has been funded by the UGC-sponsored PhD programme of Rabindranath Tagore Centre for Human Development Studies which is a joint initiative of Calcutta University and Institute of Development Studies Kolkata (IDSK). I am indebted to Prof. Debdas Banerjee, Prof. Achin Chakraborty and Prof. Arun Bandyopadhyay for awarding me this covetable fellowship. I know it was their way of encouraging me to carry on with the doctoral work. Being a fellow at IDSK has proved to be an academically enriching experience for me. Research and library facilities at the institute are very conducive to achieve expertise and perfection in scholarly pursuits.

I am thankful to Prof. Francesco Pastore (who was my session chair at the XXX AIEL National Conference of Labour Economics, held in Cagliari, Italy) for his insightful comments and suggestions to improve the work. The expert comments given at the National
Seminar organised by National Sample Survey Office (NSSO), Ministry of Statistics and Programme Implementation (MoSPI), Government of India, helped me to develop my work. I would also like to thank Prof. Padmini Swaminathan for her suggestions at the 57th Annual ISLE Conference and to Prof. Mahalaya Chatterjee for chairing so many of my presentations and providing insightful comments. Valuable suggestions and positive comments at the departmental Pre-Submission Seminar helped me in structuring the final manuscript of the thesis. For this I am grateful to Prof. Anjan Chakraborty and Prof. Sankar Kumar Bhaumik. I am indebted to Prof. Gita Sen for her invaluable suggestions to improve the chapter on ‘paid unpaid work’. She has very generously shared the methodology developed by her on ‘intersectionality’.

Special mention needs to be made about Dr. Paramita Dasgupta (current Director General of ASCI, Hyderabad) who first sowed the seed of the idea of doing PhD in my mind. I had appeared for an interview at ASCI and on perusing my academic bio-data she had insisted that I complete PhD as that would be a culmination of the journey. Her words had inspired me a lot. Although I could not join ASCI due to familial reasons, yet I started making the effort soon after, when we shifted base to Chennai. I would like to thank her sincerely for the encouraging discussion which she had with me at her office that day in November, 2006.

This dissertation would not have been possible without the able guidance and suggestions of Dr. Anjan RoyChowdhury. He has been instrumental in shaping the research ideas and in teaching me how to use NSS data with ease. I am extremely thankful to him for his generosity in sharing ideas and in giving me proper feedback about my work. My adeptness at extracting, using and creating variables from NSS data is due to his training. I have also received support and help from Dr. Subrata Mukherji in using NSS Data. Abhishek Podder of NSSO has also provided kind support in this matter. Training programmes organised by the Department of Economics, Calcutta University have helped me learn Stata and SPSS. Dr. Santadas Ghosh was instrumental in my being able to use Stata. I still have the notes dictated by him. “Thank you Santada”. A week long course on Advanced Quantitative Methodology organised by Prof. Indrani Chakraborty at IDSK helped me hone my econometric skills and proved very helpful. The other course which provided me with a direction for the thesis is the Feminist Methodology course organised by the Women’s Studies Research Centre, Calcutta University.
I would like to extend warmest thanks to Madhusri Ghosh for allowing me to use the IDSK library extensively. She has been so supportive of my endeavour towards pursuing PhD, right from the time I started visiting the library. Over the years we have become very good friends. Krishna Ghosh, Ashok Patra, Arpita Dutta, Sovan Sardar, Bishwanath (of IDSK library) also need to be thanked profusely for providing me with support regarding availability of books, journals and reference materials. I owe my PhD to all of them. Sanjit Kumar Bandyopadhyay (IDSK, Systems Support) and everybody at the IDSK office deserve thanks from me for their kind support.

Among friends and colleagues, I would like to extend my heartiest and most sincere thanks to Sucheta Sardar and Namrata SinghaRoy. This journey of togetherness at IDSK and Calcutta University, Department of Economics has been so memorable. They have enhanced my capabilities infinitely, in spite of being so much younger to me. Without Sucheta my research would never had taken flight and shape. Without Namrata my thesis would never have seen the light of the day. I would also like to thank Poulomi Lahiri for helping me understand the logit model.

Some very dear friends who need to be thanked warmly are Rajasree Basu Ghosh without whose support it would not have been possible for me to take up the effort in Chennai; Dr.Arpita Bose, my childhood friend who has always encouraged me in this endeavour; Tanima Chatterjee, who has been influential in my starting the PhD programme effectively and Sonali Srivastava- Tanna without whom I would not have been able to achieve this success. I would like to profusely thank Dr. Syamasis Bandyopadhyay; my best friend, philosopher and guide, for traversing this journey with me through the ups and downs.

I would like to mention and appreciate the immense love and support extended to me by my family. My father-in-law, Mr. Nirupam Bhaduri has always encouraged me to pursue doctoral studies. I am sure he will be very pleased now. My husband Mr. Indranil Bhaduri and my sons Ishitro, Ipsito have been so patient with my crazy schedules and mood swings. Indranil has borne everything with a smile, never complained about anything and has always ensured that I am able to continue with my work in an uninterrupted manner. He has always been by my side and he is my greatest source of mental strength. I am blessed to have them in my life and am incomplete without them.

Lastly, I would like to thank Mr. Adhir Mondal for painstakingly editing the final manuscript of the thesis and to Dhar Printers and General Order Supplier for printing it.
