List of Tables

Table 3.1  Surface roughness and average grain size from AFM.  
Table 3.2  Table showing the lattice parameters of AgInSe₂ and AgGaSe₂ thin films.  
Table 3.3  Table showing the distortion parameter (η), anion displacement (u), bond lengths (R₁₅, R₁₆), bond length mismatch (δ), grain size (t) and strain.  
Table 3.4  The binding energy positions (in eV) for the major peaks in the XPS spectra of AgInSe₂ and AgGaSe₂ thin films.  
Table 3.5  Surface roughness and grain size of the OVC thin films.  
Table 3.6  The atomic positions of 8 atoms in the unit cell of AgGaSe₂.  
Table 3.7  Table showing the lattice parameters of the OVC thin films.  
Table 3.8  The structural parameters from XRD patterns of the OVC thin films.  
Table 3.9  The binding energy positions (in eV) of major peaks in the XPS spectra of the OVC thin films.  
Table 4.1  The band gap values E₁, E₂ and E₃ and spin-orbit and crystal-field splitting parameters (in eV).  
Table 6.1  Surface roughness and average grain size of the thin films from AFM.  
Table 6.2  Structural parameters obtained from the XRD patterns of AgInSe₂:Sn and AgInSe₂:Sb thin films.  
Table 6.3  Structural parameters obtained from the XRD patterns of AgGaSe₂:Sn and AgGaSe₂:Sb thin films.  
Table 6.4  The binding energy positions in eV for the major peaks in the XPS spectra.  
Table 6.5  Electrical transport parameters for the AgInSe₂:Sn thin films.  
Table 7.1  Atomic percentages of Ga and Sb in AIGS and OVC thin films along with anion/cation ratio from EDAX.  
Table 7.2  Structural parameters of the Set 1 AIGS and Set 2 OVC films.  
Table 7.3  The binding energy positions in eV of the major peaks in the XPS spectra.
