Contents

Chapter 1
Introduction and objectives of the study

Introduction
Objectives of the study
References

Chapter 2
Cloning and sequencing of some of the gene(s) involved in p-nitrophenol degradation in *Ralstonia* sp. SJ98

Introduction
Materials and methods
Results and discussion
References

Chapter 3
Study of diversity of the gene encoding “benzenetriol dioxygenase” involved in p-nitrophenol degradation

Introduction
Materials and methods
Results and discussion
References

Chapter 4
Study of bacterial community structure prior to bioremediation of a pesticide contaminated soil and assessing the stability of the exogenously introduced microbe in soil

Introduction
Materials and methods
Results and discussion
References

Chapter 5
Demonstration of chemotaxis of *Ralstonia* sp. SJ98 towards p-nitrophenol in soil

Introduction
Materials and methods
Results and discussion
References

Chapter 6
Summary
