ACKNOWLEDGEMENTS

Professor Dipankar Gupta, my doctoral thesis supervisor, has been my mentor, intellectual conscience, and, importantly, a support in the times of crisis that are the lot of every graduate student. To say that I am grateful to him is an acute understatement.

A Junior Research Fellowship (2003-2006) awarded by the University Grants Commission aided the completion of the fieldwork and the writing of the thesis.

The Faculty members and the staff of the Centre for the Study of Social Systems have been enduring supports for me through the last five years. In particular, Professor Avijit Pathak and Dr Harish Naraindas have encouraged and stimulated my efforts. Their interest in this work has strengthened the sense of security that aids the writing process. Mr Negi, Mr Jhangiani, and Mr Bhupinder of the CSSS Office have provided much help in the course of the PhD programme, easing the interface with official strictures.

I am grateful to the staff of the Libraries of the Jawaharlal Nehru University (Main, CSSS-DSA, CHS-DSA, CPS-DSA and CESP-DSA); the Library of the National Institute of Science, Technology and Development Studies; the Library of the National Institute of Advanced Studies, Bangalore; the Library of the National Centre for Biological Sciences, Bangalore; the Nehru Memorial Library, New Delhi; the Library of the French Information Resource Centre, New Delhi; and the Library of the Max Mueller Bhavan, New Delhi.

I am grateful to the members of the Cervical Cancer Laboratory (alias) for the opportunity of participant observation of their group. It must have been trying for them to understand and situate the alien life-form suddenly in their midst. They are the heart of this thesis. I wish I could name them all, but I am honour-bound to protect their privacy. I thank them for the sojourn in their world.
I am indebted to Professor Madhavan Palat, formerly of CHS. His encouragement and empathy helped me through a Kafkaesque bureaucratic imbroglio that no graduate student should have to encounter. Without his help, I would not have gotten far enough to be typing this page.

I am grateful to Professors A. Bhattacharya, R. Prasad, S. Goswami, C. Mukhopadhyay, and G. Mukhopadhyay of the School of Life Sciences and the Special Centre for Molecular Medicine, JNU, for their support, information, and interest in my work. The members of their working groups were extremely helpful when I was in the process of gaining preliminary exposure to the laboratory environment.

The staff of Sabarmati Hostel, especially the hardworking and long-suffering cleaning and kitchen staff, freed me from domestic responsibilities, so that I could focus on writing. They have always been patient and uncomplaining with surly graduate students, who tend to forget just whose backbreaking drudgery makes elevated intellectual activity possible. Mrs Ram Murti Devi made, and continues to make, the Top Floor of Sabarmati East more than habitable. And with a smile — a lesson to me, to us all.

The SSS II and Library photocopy units of JNU and Mr Manoj Singh of Pawar Prints, Ber Sarai, have my vote of thanks for their tolerance of a particularly truculent and demanding customer. You are indispensable!
