CHAPTER 8
FUTURE DIRECTION OF RESEARCH
The statistics of this research shows that unskilled and semiskilled are facing same problems. To explore the two segments of labour further there is a need of future research in this direction.

This research also finds out that surprisingly there is no significant difference between skilled and unskilled labours on account of expatriation costs to the UAE. This result leaves an area for further research in future to be explored.

The future research may also include the domestic helpers in UAE as they are highly vulnerable to the exploitation.

The research shows that there are instances of wage discrimination based on country of origin. The future research is needed to study the reason for it and how it varies from one country of origin’s expatriate to another one and at what skill segment.

There is a need to study the status of women in the UAE society as it is evident that it has transformed the women workforce and women participation in the workforce has been increased. Also the future research should focus on how the transformation is done including the steps taken by the government.

The research gives an overview about implementation of nationalisation programmes in UAE. So, it will be an important issue that how the Emiratisation will impact on Indian Economy in future, and is good for carrying out future research.

The research mentions that the UAE is a multicultural society so the future research is needed for better understanding of diversity of the population based on ethnicity.

Based on the discourses its evident that Emiratisation will impact the Indian economy. So there is an urgent need for research about its impact on Indian Economy in terms of remittances.

The research finds out that there is a lack of awareness of government benefit plans for the expatriates. So, it requires a research in finding the impact of advertisement on target group to help improve the content of advertisement and mode of advertisement.

There is thus ample scope of future research in this area.
