

## LIST OF TABLES

Table 1 (chapter 3)	Optimal solutions when $M \geq N$
Table 2 (chapter 3)	Optimal solutions when $M < N$
Table 3 (chapter 4)	Sensitivity analysis for various inventory model parameters
Table 4 (chapter 5)	Sensitivity analysis for various inventory model parameters
Table 5 (chapter 6)	Sensitivity analysis for various inventory model parameters
Table 6 (chapter 7)	Effect of changes in various parameters of the inventory system
Table 7 (chapter 7)	Impact of deterioration rate on inventory replenishment policies
Table 8 (chapter 7)	Effect of changes in various parameters in the implementation of postponement strategy
Table 9 (chapter 7)	Impact of deterioration rate on the difference between the two systems
Table 10 (chapter 8)	Input data
Table 11 (chapter 8)	Total cost, service level and waiting time results when $\pi_r = 25$
Table 12 (chapter 8)	Total cost, service level and waiting time results when $\pi_r = 50$
Table 13 (chapter 8)	Total cost, service level and waiting time results when $\pi_r = 100$
Table 14 (chapter 9)	Input data
Table 15 (chapter 9)	Total cost, service level and waiting time results when $\pi_r = 25$
Table 16 (chapter 9)	Total cost, service level and waiting time results when $\pi_r = 50$
Table 17 (chapter 9)	Total cost, service level and waiting time results when $\pi_r = 100$
Table 18 (chapter 10)	Individual minimum and maximum of objective functions
Table 19 (chapter 10)	Input data for $TC_z^1, TC_z^0$
Table 20 (chapter 10)	Possible values of MF for objective functions
Table 21 (chapter 10)	Optimal value of $\lambda$
Table 22 (chapter 10)	Optimal results when $TC_r$ is chosen as the most important objective function
Table 23 (chapter 10)	Pareto optimal results
Table 24 (chapter 10)	Individual minimum and maximum of objective functions

Table 25 (chapter 10)	Input data for $TC_z^1, TC_z^0$
Table 26 (chapter 10)	Optimal value of $\lambda$
Table 27 (chapter 10)	Optimal results when $TC_r$ is chosen as the most important objective function
Table 28 (chapter 10)	Pareto optimal results.

## LIST OF FIGURES

- Figure 1      Supply chain (example)
- Figure 2      Probability function for Poisson demand with mean and variance equal to 15
- Figure 3      Continuous review (R,Q) replenishment policy
- Figure 4(a)    Total accumulation of interest payable when  $PM/\lambda \leq T$
- Figure 4(b)    Total accumulation of interest payable when  $M \leq T \leq PM/\lambda$
- Figure 5(a)    Total amount of interest earned when  $PM/\lambda \leq T$   
(or)  $M \leq T \leq PM/\lambda$
- Figure 5(b)    Total amount of interest earned when  $N \leq T \leq M$
- Figure 6      Total amount of interest earned when  $T \leq N$
- Figure 7(a)    Total amount of interest earned when  $M \leq T$
- Figure 7(b)    Total amount of interest earned when  $T \leq M$
- Figure 8(a)    Inventory level when  $Q \geq Z$
- Figure 8(b)    Inventory level when  $Q < Z$
- Figure 9      A two-echelon supply chain with AP scheme
- Figure 10     The total accumulation of interest earned when  $M < N$
- Figure 11     Total amount of interest earned when  $M \geq N$
- Figure 12     Inventory level at time t
- Figure 13     Total amount of interest earned when  $N \leq M \leq T + N$
- Figure 14     Total amount of interest earned when  $N \leq T + N \leq M$
- Figure 15     The optimal total profit for various values of N in type-1 and type-2 demands
- Figure 16     The optimal total profit for various values of s in type-1 and type-2 demands
- Figure 17     The total profit for any given N (e.g., N = 8, 17, and 26) when demand is of type-1

- Figure 18 The total profit for any given  $N$  (e.g.,  $N = 8, 15,$  and  $26$ ) when demand is of type-2
- Figure 19 Effect of changing saturation rate of retailer's demand
- Figure 20 Effect of changing supplier's credit period
- Figure 21 Effect of changing ordering cost
- Figure 22 Effect of changing interest earned rate by the retailer
- Figure 23 Effect of changing the deterioration rate
- Figure 24 Effect of changing the holding cost
- Figure 25 Effect of changing the replenishment rate
- Figure 26 Graphical representation of the inventory system
- Figure 27(a) Impact of deterioration rate on the total cost
- Figure 27(b) Effect of changes in various parameters in the implementation of postponement strategy
- Figure 28 Partial backorder policy with control parameter  $b$
- Figure 29 Expected annual cost for three policies when  $Q_0 = 32,$   
 $Q_r = 4, \lambda_r = 0.5, h_0 = h_r = 1, L_r = 1, \hat{\pi}_r = 0$
- Figure 30 Percentage of cost saving due to partial backordering policy and fill rates when  $Q_0 = 32, Q_r = 4, \lambda_r = 0.5, h_0 = h_r = 1,$   
 $L_r = 1, \hat{\pi}_r = 0$
- Figure 31 Expected annual cost for three policies when  $Q_0 = 32,$   
 $Q_r = 4, \lambda_r = 0.5, h_0 = h_r = 1, L_r = 1,$   
 $\hat{\pi}_r = 20$
- Figure 32 Percentage of cost saving due to partial backordering policy and fill rates when  $Q_0 = 32, Q_r = 4, \lambda_r = 0.5, h_0 = h_r = 1,$   
 $L_r = 1, \hat{\pi}_r = 20$
- Figure 33 Expected annual cost for three policies when  $Q_0 = 32,$   
 $Q_r = 4, \lambda_r = 0.5, h_0 = 1, h_r = 10, L_r = 1, \hat{\pi}_r = 0$
- Figure 34 Percentage of cost saving due to partial backordering policy and fill rates when  $Q_0 = 32, Q_r = 4, \lambda_r = 0.5, h_0 = 1,$   
 $h_r = 10, L_r = 1, \hat{\pi}_r = 0$
