LIST OF TABLES

CHAPTER III

Table 3.1: Showing summary of Sample Characteristics

Table 3.2: Showing Internal Consistency Reliability (Cronbach’s Alpha) of the scales used in the study:

CHAPTER IV:

Table 4.1: Descriptive Statistics of Study Variables:

Table 4.2: Showing values of t-test for first group Urban and Rural women.

Table 4.3: Showing values of t-test for second group Married and unmarried women.

Table 4.4: Showing values of t-test for third group of women with education up to high school and women with education up to graduation:

Table 4.5: Showing correlation among study variables among total sample.

Table 4.6: Showing correlation among study variables among urban and rural women.

Table 4.7: Showing correlation among study variables among married and unmarried women.

Table 4.8: Showing correlation among study variables among women with different qualifications.

Table 4.9: Hierarchal Regression Analysis for predicting ‘Psychological Wellbeing’ of Urban and Rural women:

Table 4.10: Hierarchal Regression Analysis for predicting ‘Satisfaction’ of Urban and Rural women:

Table 4.11: Hierarchal Regression Analysis for predicting ‘Efficiency’ of Urban and Rural women:

Table 4.12: Hierarchal Regression Analysis for predicting ‘Sociability’ of Urban and Rural women:

Table 4.13: Hierarchal Regression Analysis for predicting ‘Mental Health’ of Urban and Rural women:

Table 4.14: Hierarchal Regression Analysis for predicting ‘Inter-Personal Relations’ of Urban and Rural women:

Table 4.15: Hierarchal Regression Analysis for predicting ‘Psychological Wellbeing’ of married and unmarried women:
Table 4.16: Hierarchical Regression Analysis for predicting ‘Satisfaction’ of married and unmarried women:

Table 4.17: Hierarchical Regression Analysis for predicting ‘Efficiency’ of married and unmarried women:

Table 4.18: Hierarchical Regression Analysis for predicting ‘Sociability’ of married and unmarried women:

Table 4.19: Hierarchical Regression Analysis for predicting ‘Mental Health’ of married and unmarried women:

Table 4.20: Hierarchical Regression Analysis for predicting ‘Interpersonal Relations’ of married and unmarried women:

Table 4.21: Hierarchical Regression Analysis for predicting ‘Psychological wellbeing’ of women with different qualifications (below and up to high school and graduation above):

Table 4.22: Hierarchical Regression Analysis for predicting ‘Satisfaction’ of women with different qualifications (below and till high school and up to graduation and above):

Table 4.23: Hierarchical Regression Analysis for predicting ‘Efficiency’ of women with different qualifications (below and till high school, and up to graduation and above):

Table 4.24: Hierarchical Regression Analysis for predicting ‘Sociability’ of women with different qualifications (below and till high school, and up to graduation and above):

Table 4.25: Hierarchical Regression Analysis for predicting ‘Mental health’ of women with different qualifications (below and till high school, and up to graduation and above):

Table 4.26: Hierarchical Regression Analysis for predicting ‘Inter-personal Relations’ of women with different qualifications (below and till high school, and up to graduation and above):

Table 4.27: Hierarchical Regression Analysis for predicting ‘Quality Of Life’ of Urban and Rural women:

Table 4.28: Hierarchical Regression Analysis for predicting ‘Quality of Life’ of married and unmarried women:

Table 4.29: Hierarchical Regression Analysis for predicting ‘Quality of life’ of women with different qualifications (below and till high school, and graduation and above):

Chapter VI:

Table 5.1: summary of significant predictors for psychological well – being and quality of life
