At the outset, I am placing on record my deeply-felt thanks to my thesis supervisor Professor C.P. Chandrasekhar for his warm encouragement and thoughtful guidance. It has been an honour to be his Ph.D. student. I appreciate all his contributions of time and ideas to make my Ph.D. experience productive and stimulating. The joy and enthusiasm he has for his research was contagious and motivational for me, even during tough times in the Ph.D. pursuit.

I would like to pay my sincere gratitude to my un-official supervisor of Ph.D. thesis Professor William Liefert of United State Department of Agriculture, Washington DC, USA, not only for his excellent guidance on econometric modelling, but also for his advice, supervision, and crucial contribution, which made him a backbone of this research and so to this thesis. His involvement with his originality has triggered and nourished my intellectual maturity that I will benefit from, for a long time to come.

I would like to express my sincere thanks to Prof. Anjan Mukherji, Prof. Prabhat Patnaik, Prof. Jayati Ghosh, Prof. K.P. Kannan, Dr. Praveen Jha, Prof. Ramesh Chand, Dr. C.S.C. Sekhar and Dr. Sachin Chaturvedi for their role in keeping my academic spirit high.

I want also to acknowledge the support of the Fox International Fellowship, Yale University, USA without which writing this thesis might not be possible. I am very much honoured to be a Fox International Fellow because of its great prestige. The fellowship gave me ample opportunities not only to interact with the faculty and students at Yale University but also to visit USDA and work with William Liefert. It was certainly, hands down, one of those chapters in my life that I will never forget.

The help provided by the staff at the JNU Central Library, the Exim Bank Library, the Krishi Bhavan Library, the Ratan Tata Library and the Central Secretariat Library has been immensely useful. I would like to thank Centre for Economic Studies' staff particularly Mr. Sen for their kind help.

The company of friends played instrumental role in the completion of this work. Warmth in their friendship and the countless light moments we shared has been of immense comfort throughout my stay in JNU. I am grateful to Rafi, Sandeep, Pradip, Om Prasad, Satya, Joseph, Dheeraj Nite, Dhannjay, Vinod, Zakku, Partha, Shouvik, Ajay Naik, Arindab, Afsil, Abdi, Khiro Raj, Sagar, Sarvan, Siddik, Shailendra, Pankaj, Ramaa, Sejuti and Richa Chintan not only for making me feel at home but also for many interesting and good-spirited discussions relating to this research.

Last, but not least, I would like to thank my wife Saumya for her understanding and love during the past few years. Her support and encouragement was in the end what made this dissertation possible. My parents receive my deepest gratitude and love for their dedication and the many years of support during my Ph.D. studies that provided the foundation for this work.

Finally, I bow before the Revered Master for giving me courage and resolve for accomplishing this challenging task.

Ashutosh Kumar Tripathi
