ACKNOWLEDGEMENT

The author takes this opportunity to express his deep sense of gratitude to Dr. R. I. Ganguly, Professor, Metallurgical Engineering Department, Regional Engineering College, Rourkela for his constant attention and supervision with active interest, invaluable guidance and immense encouragement throughout the course of this work.

Prof. A. Sarangi, Head of the department of Metallurgy and Prof. S. Mishra, Principal, Regional Engineering College need a special mention for the valuable suggestions given during this work.

Prof. S. S. Pani, Ex. Dy. General Manager, Rourkela Steel Plant has been encouraging and guiding the work through out. Valuable suggestions given by him has enabled to proceed with the project with confidence. A lot of pains have been taken by him for correcting the manuscript. Special acknowledgements are due to him.

Prof. B. K. Dhindaw, Indian Institute of Technology, Kharagpur has been instrumental in planning out this work with statistical design of experiments and electron fractography. Dr. J. D. Panda, Director, Dalmia Institute of Scientific and Industrial Research, Rajgangpur, has been guiding in high temperature work in torsion test through out the course of experiment.
Dr. Sanak Mishra, Principal Research Manager, Research and Development Centre for Iron and Steel, Ranchi has been of great assistance for the High Temperature Metallurgy work. Dr. O.N. Mohanty, Dy. Director, National Metallurgical Laboratory, Jamshedpur, contributed his valuable suggestions in high temperature creep and torsion experiments. Acknowledgements are due to all of them.

Special mention is also due to Dr. S. Pal, Research and Development Centre for Iron and Steel, Ranchi and Mr. K. Bishoyi, Mr. B. N. Das and Mr. G. N. Rao of Rourkela Steel Plant for their co-operation and whole hearted support for this work.

The author wishes to acknowledge M/s. Tata Engineering and Locomotive Company Ltd., Jamshedpur for extending facilities for weldability studies and also practical application of the developed steel in their earth moving equipment division.

Finally the author acknowledges the management of the Rourkela Steel Plant, Rourkela who have kindly given permission and extended necessary facilities to carry out this research work as an external Ph.D. scholar.
