ACKNOWLEDGEMENT

At the onset, I feel delighted to express my gratitude to my research guide and supervisor Prof. M.C. Dash for his endless encouragement, inspiration, gorgeous guidance and suptuous supervision for completion of this thesis. Humble reverence are also owed to Madam Sovita Dash for her compassionate cognition.

Words would be insufficient to eulogize Dr. B.K. Nayak who has triggered the impetus for renance of the once relegated research regiment within me. Angelic affections of Madam Nayak, anecdotal ardour of the kid duo Jitu and Muna, and the bounteous blessings of Mousa and Mausi all intertwined to instill innovative inferences.

I am indebted to each and every family member and friend of mine who fostered fortification of the fulcrum of my research fascinations.

Obligations are undoubtedly owed to Dr. N. Mohanty, staffs of Sericulture Department and School of Life Sciences who have assisted in the work. Thanks are also due to members of Acharya Associates for the precise compilation.
