### Chapter 1: Introduction

1-31

1.1 : General

1.2 : Electronic Band Structure

1.3 : Concept of group

1.4 : Review of literature

1.5 : The role of Lie algebraic methods

1.6 : Lie groups

1.7 : Lie algebras and representations of Lie groups

1.8 : Casimir Operator

1.9 : Properties of Lie algebras

   A. Definition
   
   B. Physical Realization of Lie algebra
   
   C. Matrix Representation of Lie Algebra
   
   D. Number of operators in the algebra

Table 1.1: Number of the operators in Lie algebras

1.10 : Present work

1.11 : Different Chapters of the Thesis
Chapter 2: Determination of Energy Bands of Solids 32-57

2.1: Wigner-Seitz Cellular Method 32
2.2: Nearly Free Electron Theory 33
2.3: Tight Binding Approximation 38
2.4: Kronig-Penney Model 42
2.5: Green Function Method 47
2.6: Density Functional Theory 50
2.7: Muffin-tin Approximation 56

Chapter 3: Different States of Pöschl-Teller Potential: An Algebraic Approach 58-74

3.1: The methodology for treating Schrödinger equation problems 58
3.2: Bound states of Pöschl-Teller potential 59
3.3: Scattering states of Pöschl-Teller potential 66
3.4: Result and discussions 71
3.4.1: Periodicity of the Pöschl-Teller potential 72
3.4.2: The graphical form of the Pöschl-Teller potential 73
3.5: Conclusion 73

Chapter 4: An su(1,1) Algebraic Approach to Periodic Potential 75-82

4.1: Schrödinger equation for a particle in one dimensional Scarf potential 75
Contents

4.2 : Result and discussions 80

4.2.1 : Periodicity of the Scraf potential 81

4.2.2 : The graphical form of the Scraf potential 81

4.3 : Conclusion 82

Chapter 5 : Unitary Representation of su(1,1) and Determination of Energy Bands 83-91

5.1 : Unitary Representation of su(1,1) 83

5.2 : Determination of energy bands and gaps 86

5.3 : The graphical interpretation of energy bands 89

5.4 : Results and discussions 90

5.5 : Conclusion 91

Chapter 6 : Conclusion and Prologue to the Future 92-98

6.1 : Conclusions 92

6.2 : Prologue to the future 97
