Chapter-5
Retailer’s Optimal Replenishment Policy with Trade Credit in Inflationary and Fuzzy Environment with Different Demand Pattern

Contents:
5.1 Introduction ........................................................................................................................................113
5.2 Retailer’s Ordering Policy when Demand is Credit Period or Selling Price Sensitive……115
  5.2.1 Assumptions .......................................................................................................................116
  5.2.2 Notations ..........................................................................................................................117
  5.2.3 Formulation of Mathematical Model ....................................................................................118
  5.2.4 Fuzzy Inventory Model ........................................................................................................121
5.3 Retailer’s Ordering Policy when Demand Depends on Initial Stock-level………………122
  5.3.1 Formulation of Mathematical Model ....................................................................................122
  5.3.2 Fuzzy Inventory Model ........................................................................................................124
5.4 Numerical Examples ....................................................................................................................124
5.5 Summary and Concluding Remarks ........................................................................................131
  References ........................................................................................................................................131
# Chapter-6

**Volume Flexibility and Reliability in Production Inventory Model with Imprecise Cost Parameters**

## Contents:

6.1 Introduction..................................................................................................................135

6.2 A Fuzzy Multi-item Production Model with Reliability and Flexibility under limited Storage Capacity with Deterioration via Geometric Programming...........................................139

6.2.1 Assumptions...........................................................................................................139

6.2.2 Notations.................................................................................................................140

6.2.3 Mathematical Formulation of Inventory Model.......................................................141

6.2.4 Crisp Model.............................................................................................................141

6.2.5 Fuzzy Inventory Model with Imprecise Costs and Resources.................................143

6.2.6 Primal Problem.......................................................................................................144

6.2.7 Dual Problem..........................................................................................................144

6.3 Volume Flexible Production Policy with Repairable Defective Product.........................147

6.3.1 Assumptions...........................................................................................................147

6.3.2 Notations.................................................................................................................147

6.3.3 Mathematical Formulation of Inventory Model.......................................................148

6.4 Numerical Examples...................................................................................................151

6.5 Summary and Concluding Remarks............................................................................159

References..........................................................................................................................The paper based on the first section of this chapter has been published in International Journal of Mathematics in Operational Research, 3(1), 2011. [ISSN: 1757-5869] The paper based on the second section of this chapter has been published in Proceedings of the 2011 International Conference on Advances in Supply Chain and Manufacturing Management, IIT Kharagpur, India, December 16–18, 2011.
Chapter-8
Three-Stage Supply Chain Coordination under Fuzzy Random Demand and Production Rate with Imperfect Production Process

Contents:
8.1 Introduction........................................................................................................175
8.2 Assumptions and Notations...............................................................................178
  8.2.1 Assumptions...............................................................................................178
  8.2.2 Notations...................................................................................................178
8.3 Formulation of Integrated Inventory Model.................................................180
  8.3.1 Producer’s Inventory Model.......................................................................181
  8.3.2 Distributor’s Inventory Model.....................................................................183
  8.3.3 Retailer’s Inventory Model..........................................................................184
  8.3.4 Crisp Integrated Model...............................................................................186
  8.3.5 Fuzzy Integrated Model.............................................................................186
8.4 Numerical Example..........................................................................................189
  8.4.1 Example Data............................................................................................189
  8.4.2 Solution Procedure.....................................................................................189
  8.4.3 Sensitivity Analysis......................................................................................192
