ACKNOWLEDGEMENT

I am greatly indebted to my teacher and guide Dr. R.K.Das, Ph.D.(Kalyani), Reader, School of Life Sciences, for exposing me to the field and for his valuable and untiring constant supervision during the entire period of investigation. His constant encouragement, meticulous care and unfailing affection made this work possible.

I am grateful to the present and previous Heads, School of Life Sciences for providing necessary laboratory facilities and for encouragement during the course of study. My thanks are also due to the other staff members, teaching and non-teaching, of the School of Life Sciences for their generous help from time to time and interests shown in the study.

Help of my laboratory mates Dr.(Mrs.) B. Roy and Mr. K. Sahu in particular and of other research fellows of the School in general is highly acknowledged. Thanks are due to Mr. P.N. Panigrahi for typing the thesis.

I also express my gratitude to Dr.A.K.Mandal,MD., Associate Professor, Department of Pathology, MAMC, New Delhi for providing opportunity to complete the thesis work.

Financial assistance from the UGC, India in the form of a Grant-in-aid Scheme (F-3-137/87, SR-II, dt.2.1.88) sanctioned to Dr. R.K.Das, under which the work was done is highly acknowledged.

My sincere thanks are also due to my brother, Aswini who helped a lot during the research period.
At the end I would like to express my heartfelt thanks to hundreds of habitual gudakhu users and non-users for co-operating with me by providing buccal smears, blood samples and saliva.

Bipen Chandra Dash
