List of Algorithms

Algorithm 3.1. **Reconfigure** the topology when node i is deleted from the Perturbed Torus derived from a base Torus structure with \( n \) rows and \( n \) columns. ..............................................................52

Algorithm 3.2. Reconfigure the topology when node i is added to the Perturbed Torus derived from a base Torus structure with \( n \) rows and \( n \) columns. ..............................................................54

Algorithm 3.3. Send a message from the current node C to the destination node D which is originated at source node S in the Perturbed Torus derived from a base Torus structure with \( n \) rows and \( n \) columns. ..............................................................55

Algorithm 3.4. Send a message from the current node C to the destination node D which is originated at source node S in a CG-I topology, \( C_p S \) with \( p=n^2-1 \) and connection set \( S = \{-n,-1,1,n\} \). 63

Algorithm 3.5. Finding a new neighbor node for node i in the direction of jump \( x \) S. \( p \) is the size of the base circulant graph, ..............................................................66

Algorithm 3.6. Send a message from the current node C to the destination node D which is originated at source node S in a RCG \( R_s \) with \( qsp=n^2-1 \) and \( S = \{-n,-1,1,n\} \) ..............................................68

Algorithm 3.7. Send a message from the current node C to the destination node D which is originated at source node S in a Circulant Graph-II, \( C_p S \) with \( p=k^2-1 \) and connection set \( S = \{-k^{n-1}, k^{n-2}, \ldots, -1, 1, k^{n-2}, k^{n-1}\} \) ..............................................................72

Algorithm 3.8. Send a message from the current node C to the destination node D which is originated at source node S in a RCG-II, \( R_q S \) with \( qsp=k^2-1 \) and \( S = \{-k^{n-1}, k^{n-2}, \ldots, -1, 1, k^{n-2}, k^{n-1}\} \) ..............................................................76

Algorithm 3.9. Send a message from the current node C to the destination node D which is originated at source node S in a Circulant Graph-II, \( C_p S \) with \( p=2^{n-1} \) and connection set \( S = \{1,2,\ldots,2^{n-2},2^{n-1}\} \) ..............................................................81

Algorithm 3.10. Send a message from the current node C to the destination node D which is originated at source node S in a RCG-III, \( R_q S \) with \( qsp=2^2-1 \) and \( S = \{1,2,\ldots,2^{n-2},2^{n-1}\} \) ..............................................................84

Algorithm 4.1 Find place i for node m in the logical topology, given the traffic matrix T and distance matrix \( D \) for an N node network ..............................................................93

Algorithm 4.2 Find place i for node m in the logical topology, given the traffic matrix T and distance matrix \( D \) for an N node network ..............................................................94
