PREFACE

Anxiety is a natural phenomenon, it occurred as ever since the human society came into existence. Anxiety is a psychological and physiological state characterized by cognitive, somatic, emotional, and behavioral components. These components combine to create an unpleasant feeling that is typically associated with uneasiness, apprehension, fear, or worry. Creativity is the ability to generate innovative ideas and manifest them from thought into reality. While activities resulting in novel materials and intellectual values may be termed as creativity, it implies the presence of individual abilities, motives, knowledge, and capability in creating a product by novelty, originality, and uniqueness.

The present research endeavor is to work out a relationship between anxiety and creative abilities among Intermediate Students. It is also the aim of study to differentiate for magnitude of relationship on account of age, sex, family background, and educational profile of students.

It is a matter of great pleasure to express my sincere regards and grateful obligations to those who have been of great help to me during the tenure of the present investigation.
