Acknowledgements

At the forefront, I praise God, for showering upon me His choicest blessings. I feel fortune and grateful to Him for giving me this opportunity and granting me the capability to proceed successfully. This thesis appears in its current form due to the assistance and guidance of several people who have played a significant role in my research program. I would therefore like to offer my sincere thanks to all of them.

At first, I would like to express my deep and sincere gratitude to my research supervisor Dr. Vivek K. Gupta, Professor and Head, Department of Physics and Electronics, University of Jammu, Jammu, for giving me the opportunity to do research and providing invaluable guidance throughout this research. He has contributed quite significantly in my personal and academic growth. His dynamism, vision, sincerity and motivation have deeply inspired me. He has taught me the methodology to carry out the research and to present the research work as clearly as possible. It was a great privilege to work and study under his guidance. Words fail me to express my appreciation to him for his suggestions which helped me a lot in my research. Thank you doesn’t seem sufficient but it is said with appreciation and respect to him. I would also like to thank him for his friendship, empathy and great sense of humor.

I express my sincere thanks to Prof. Rajni Kant, for his guidance, valuable suggestions time to time, innovative ideas, generous help and fruitful collaboration throughout my research work.

I owe a great deal of appreciation and gratitude to Prof. Goutam Brahmachari and his scholar Dr. Bubun Bannerjee from Laboratory of Natural Products & Organic Synthesis, Department of Chemistry, Visva-Bharati University, Santiniketan, West Bengal; for providing me the samples whose three-dimensional crystal structures have been reported in this thesis. His support throughout the research is very valuable that I cannot express in words. I would like to give my very big thanks to Prof. Neeraj Misra for providing help in carrying out theoretical studies of some compounds that gives an additional information regarding the vast applications of my compounds. To work with their research group has always been and continues to be a great experience. I remain grateful to Ambrish Kumar Srivastava and
Sarvesh Kumar Pandey from Department of Chemistry, Indian Institute of Technology Kanpur, Uttar Pradesh, India for rendering me their valuable help in my publication in one of the best reputed journal that would have taken much longer time without their guidance and support.

I would like to say thanks my research colleagues, Dr. Naresh, Mr. Balbir and Mr. Suresh for constant encouragement, timely help and their encouraging words that kept me going when coffee had lost its stimulating effect.

I am equally delighted to be in the company of Mr. Davinder, Mrs. Ratika, Mrs. Preetika and Mrs. Sonia for their constant support, motivation and help. I also take this opportunity to thank all the members of administrative, non-teaching and technical staff of the department for their timely help during the period of my research work.

Parents are reverentially acknowledged for their blessings. I am extremely grateful to my parents Mrs. Sudesh Sharma and Mr. Rakesh Sharma for their love, prayers, caring and sacrifices for educating and preparing me for my future. They are the ultimate role models. My special thanks to my sisters Mrs. Priyanka and Mrs. Roshika who continuously supported and encouraged me during my research. The contribution of my cousin brothers Mr. Pankaj Sharma and Mr. Subham Badhyal is enormous. Moreover I am equally delighted to the little angels for they have provided assistance in numerous ways.

(Sakshi Sharma)
