ACKNOWLEDGEMENT

I sincerely thank all those who have contributed in one way or another to this study. To fathom my guide’s Dr. Kandarpa Kr. Saikia help in words is beyond imagination. I express my deep gratitude to him for his care, kindness and generosity. His fruitful comments and nudging has been of crucial influence on the present study. He has supported me in every possible way from the beginning. Furthermore, it has been a memorable experience as his student.

My sincerest gratitude to Dr. N. K. Hazarika, Profesor & Head, Department of Microbiology, Gauhati Medical College and Hospital, Guwahati without whose permission the most crucial part of the work wouldn’t progress, and to Dr. Rupelkha Chakravarty, Department of Microbiology, Gloria Diagnostics for providing me with bacterial samples, the basis of this research

I extend my gratitude to the Department of Biotechnology, Government of India as the funding source.

The faculty members of the Department of Bioengineering & Technology, Gauhati University for their support and wise words.

Grateful acknowledgments are also due to Partha Sarma and Upasana Sarma for all the brainstorming and discussion every time results weren’t result enough, Sandipan Talukdar, Sukanta Nath and Haren Sharma for being the joy that they were, and Mrinal Baishya for the running around the hospital wards for patient interviews and sample collection. All the research students in the department and other departments for being there in words or action whenever help was all that could push me forward.

My parents for their conviction in me and continuous support. Being my parents most of all, and friends alike. Just a thought – who would I be, without them! This goes out to both of you – Amreet R. Borah and Jani Borah.

My extended family and my soul family, a million thanks!

Vedant Vikrom Borah
