ACKNOWLEDGMENTS

The author wishes to place on record his sense of indebtedness and gratitude to Prof. Dr. B. H. Briz-Kishore, FIE., Former Dean and Rector, Professor Water Resources, JNTU, Hyderabad for the inspiring guidance he gave at every stage of this investigation. He is the spirit behind the whole work and but for his keen interest and constant encouragement, this work could not have been completed, within a very short time.

The author wishes to express his deep sense of gratefulness to Sri. T. Narasimha Reddy, M.Tech., FIE., Director, Ground Water Department, Hyderabad, for his advise and encouragement. He has been kind enough to allow full access to the data of the Ground Water Department and provide all facilities for carrying out the work.

The author is grateful to the Vice-Chancellor, JNTU, for providing an opportunity to work for Ph.D in Water Resources. It has indeed been the author’s privilege to be the first geologist to get the opportunity of working in JNTU.

He is deeply indebted to Dr. K.V. Subba Ramaiah, Principal, Nanakram Bhagwan Das Science College, who initiated the author into the exciting world of geology and had thus inspired him in choosing a geologist career and also took keen interest in the present work.

He is very much grateful to Dr. P. Hanumantha Reddy, Senior Faculty member of Osmania University Geology Department and to Sri. P. Ramakrishna Reddy, Scientist-F, NRSA, for their valuable suggestions and the co-operation they extended throughout the work.
The author is thankful to Sri. G. Mohan Reddy, Sri. B. Sripathy Reddy and Dr. Pradeep Raj for the pains they took in critically going through portions of the manuscript of the thesis and making valuable suggestions.

The author wishes to thank Mr. U. Seesha Phani Kumar and Kumari. N. Janaki Devi for neatly typing the draft of the thesis.

His sincere thanks are also due to the draughtsman Sri. Md. Naseeruddin and Mrs. G. Revathi who took keen interest and considerable pains to draw the figures for the thesis.

The author wishes to thank Mr. V. Nagarjuna, M.S. (Canada), for taking personal interest in bringing out the thesis in a record time using latest computer techniques.

His special thanks are due to Mr. Prasad, Steno-Typist who entered the data patiently into the computer provided by Sri. Satish, B.E., MBA.

The author wishes to acknowledge the assistance received from a number of colleagues and supporting staff in the State Ground Water Department.
