CONTENTS

Acknowledgement .... i
Synopsis .... iii
List of Publications .... vii
Figure Captions .... viii

CHAPTER - I : INTRODUCTION

I.1. Importance of Coulomb-nuclear Interference Experiments 1
I.2. A Brief Review of Earlier Studies of CNI Experimental Data 2
I.3. Analytic Properties of Hadron-nuclei Scattering amplitudes 5
I.5. Applications of Optimized Polynomial Expansion 19
I.6. Pole Extrapolation 22

CHAPTER - II : NUCLEAR PARAMETERS FROM PION-4He SCATTERING

II.1. Introduction 25
II.2. Pion-nucleus Scattering Theory 31
II.3. Extrapolation Procedure 36
II.4. Analytic Structure of Nuclear Amplitude and Elliptic Mapping 41
II.5. Extrapolation Procedure for Data Away from the Forward Region 50
II.6. Results and Discussions 57

Contd.
CHAPTER III: NUCLEAR PARAMETERS FROM PION-\(^{12}\text{C}\) SCATTERING

III.1. Introduction 67
III.2. Theory and Extrapolation to Coulomb Pole 68
III.3. Analytic Structure of Nuclear Amplitude and Conformal Mapping 73
III.4. Results and Discussion 77

CHAPTER IV: PHASE SHIFT ANALYSIS OF PION-\(^{4}\text{He}\) SCATTERING

IV.1. Introduction 85
IV.2. Essential Theory 86
IV.3. Method of Analysis 87
IV.4. Results and Discussions 89

CHAPTER V: CONCLUSION

V.1. Summary of Results 99
V.2. Scope for further work 102
V.3. Concluding Remarks 103
