Acknowledgement

In this thesis I have made a sincere effort to cover up all details of synthetic aspects and characterisation of the resin copolymers derived from 2,4-dimtrophenyl hydrazone and semicarbazone of 4-hydroxy acetophenone and resacetophenone.

In this endeavour of mine, I find words inadequate to express my deep sense of gratitude to my revered teacher, philosopher and guide Prof. P. L. Nayak, Ph. D., D. Sc., F. S. P. S., Head Department of Chemistry, Ravenshaw College, Cuttack, whose constant inspiration and personal supervision has made possible the work take the present form.

I would like to express my gratitude and hearty accolade to Dr. N. C. Pati, Ph. D., Department of Chemistry, Stewart Science College, Cuttack for his punctilious guidance, advice and healthy criticism during the period of conducting the present work.

It is a great privilege for me to express my gratitude to Dr. (Mrs.) S. Lenka, Ph. D., D. Sc., Department of Chemistry, Ravenshaw College, Cuttack for her valuable suggestion, advice and careful scrutiny during the preparation of the thesis.

I am really indebted to my husband Mr. D. K. Nayak, Lecturer, B.O.S.E., Cuttack for his heartiest co-operation and constant encouragement in leading me to reach the cherished goal.

I can never forget the love, affection and inspiration that I received from Mrs. Manorama Nayak in achieving the end.

Last but not the least, I am very much thankful to Sushil, Abhi and my two sons Sonu & Pritam for their immense help in giving the finishing touch.
