ACKNOWLEDGEMENTS

As I submit my thesis, I realize that the ritual of writing of acknowledgements greatly falls short in expressing my feelings to all the people who have made this thesis possible.

"At your job you are the member of an orchestra. It depends upon you, whether the result of your team is music or noise."

I feel proud to have worked with a person who has taught me to create music (signal) out of noise. For my boss Dr. Kanury Rao, I reserve my deepest gratitude. He is not only my 'guru' but also a great source of inspiration. His unique way of concern, his sensitivity, utmost patience, unwavering faith in me and his unusual way of appreciation (which although lacked words) is the foundation on which this thesis is built. His never denying attitude for my irresistible appetite for running off home left me working even harder. I don't recall a single instance when he has not encouraged me to pursue my crazy ideas. I will ensure that I do justice to the lessons I learnt from him.

Dr Pawan Sharma has been there with his cheerful company. My special thanks to Dr Manivel for keeping afloat my love for chemistry.

Nat boss will always be dear to me like an elder brother. He has that amazing ability to make other people laugh with uncommon quizzical sense of humor. He was there to lend an ear whenever I wanted to discuss (science and other more important things). He has shared his valuable thoughts, learning from his own mistakes, his humor, his vision with me. More importantly, he has been very generous in sharing his reagents and lunch. I pestered him to no end and yet he was always there smiling and extending all the help he could. Hats off to your patience and fantastic attitude Boss!

For Zaved, I really do not know what to write (uff). He has been a part of each and every experiment making things possible for me. Thanks to his habit of coming early that gave me little extra time to sleep. I remember the changes he brought to the lab by organizing things, which of course he could not have done without my help! His support and gift of friendship is beyond words. Zaved, it was real fun working with you and I wish it could have continued further.

Anuja and I share a very sisterly rapport. Her cheerful ways and that "naughty twinkle in her eyes" worked as mood uplifters. Her support and care in my difficult times fall short of words to be expressed here.

Naresh has been very protective about me. His continuous advice in concern to my health is much appreciated. With Sabrina I have spent some wonderful hours-watching sunset and taking long walks.

The contribution of a lively, supportive, cooperative lab atmosphere is invaluable as any student can hope for and for that I am thankful to all my lab mates- Zabeen, Fahri, Balwanji, Vinod, Gyanesh, Ashok and Vladimir. Sandip, Dinesh and Ajay had always been very friendly and helping. Suman has been very caring and affectionate.

Anshu my second guru in the lab will be appreciated for sharing her expertise in immunological techniques. I am ever grateful to her for never spoonfeeding me. Pooja, I recall, had been very supportive and helping through out specifically in assisting me.
despite her busy schedule. Giridhar and Veena di will be remembered for being people with whom I set my first experiment. I am thankful to Ashok Das and Kedar who went out of the way to help me quite often.

It was a privilege to come across some of the best minds in acadamia such as Dr S.K. Sopory, Dr Shahid Jameel, Dr Vijay Kumar, Dr V.S. Reddy, Dr Sunil Mukherjee, and Dr Raj Bhatnagar during my stay in ICGEB. Dr. Shahid Jameel has taught me a lesson for life - to be generous with one's chemical. His generous gift of Tunicamycin and myristic acid have made possible the data shown in Figure 1.18 and 1.19. Dr. Sopory taught me two important lessons of science—the importance of putting controls, and always remembering the buffer composition(s).

I would like to thank Dr V.S. Chauhan for his support. I would also thank our administrative staff for all the paper work. My sincere thanks to Mr. Alok Sharma for his ever ready approach to help.

I would remember those memorable experiences that I share with my batch mates Tarannum, Mintu, Amit, Bhavna, Himani and Shweta. Time spent in the company of Deepika and Jaya would always be cherished in my heart. Shweta and Himani had been more than just batchmates. Together we have experienced the life in ICGEB, be it hardships of Ph.D, intricacies of science or personal problems. I would always look forward to those lunchtime meetings when we sat together sharing things. Shweta has been a great roommate and I recall those times when we would feel free to discuss things even at three o'clock at night. Suman and his genuine and unique ways in dealing things made me wonder sometimes. His extra concern and care for me always made me look upon him for various matters.

My best wishes and compliments to Reetesh, Smita, Anand, Alka, Gouthaman, Atish, Milan, Neetu, Purnima, Moin, Rabi, Khalid, Punjab, Das, Wricha, Vineetha and Siddharth for adding spice to the flavor of ICGEB in their own special way. I also thank Dr. Chandramauli, Rakesh and other animal house staff. I greatly acknowledge the maintenance staff and the security guards of ICGEB for their cooperation and much needed help. Scholarship received from CSIR is acknowledged.

Sindhu, Bindu, Satish da, Tuhina and Anup da made my time in JNU very memorable. Sunil and Pawan hold a special meaning for their care'n concern for me and for their wonderful friendship. Small moments make big memories after they have passed away. Faisal lives in these memories as a dear friend. Navanshu, Abhijeet, Amrak and Divya are my invaluable possessions. No words are enough to express my feelings for them. Monika and Anshu—my life long friends are very special to me. Also thanks to Nitya for all he has done.

Nidhi’s warmth of love and carefree bubble of laughter made my frustration of negative results vapourize. Taiji’s and Tauji’s everwelcoming attitude, and their immense concern
for me always made me feel at home. The void left by Vipul gives my heart a very empty feeling.

My life was a better thing to live in the company of my lovely sister Ruchi and my very affectionate younger brothers Luv and Kush. Ruchi has been more than an ideal sister. Undaunted by my elder sisterly ways her unending love for me made us get closer than ever. Going back home was made better by her pampering and her endurance of my tantrums. My twin brother's enthusiasm was a thing to look upon and learn. Their interest and inquisitiveness for my work, craze for cricket and their spontaneity always amazed me. Pragati, Kshama, Parimal and Shiva are the source of purest love and affection. Chacha, Chachi, Bua and Phoophaji have been very-very supportive and affectionate. Dadi would have been the happiest person to see my thesis. Though she is not there with us but she would always be a continuous source of inspiration, affection and love. Her strength and confidence guided me during testing times. No words are enough to articulate her contribution to this endeavor. Ma and Papa always wanted me to be bold, radical, honest, transparent, never to be afraid to make mistakes and take up challenge. Their trust and encouragement made things feasible for me. Whatever I have achieved and aspire for would never be possible without their blessings and love.

I also fondly remember all my past teachers who have shaped my thinking, making it possible to reach this point in my career. And above all I wish to express my faith in that one ALMIGHTY who made everything possible.
