ACKNOWLEDGEMENTS

I would like to take this opportunity to express deep and sincere gratitude to my supervisors Professor Rabindra Kishore Mishra, Electronic Science Department of Berhampur University and Professor Sudhakar Sahu, School of Electronics, KIIT University. I thank Professor Mishra for his immensely helpful suggestions regarding the technological aspects of Metamaterial engineering as well as imbibing in me enough confidence and nurturing me to accomplish this research work. Professor Sahu taught me the underlying physical principles of artificial engineered material potential application in RF and microwave communication system, to imagine newer designs and incorporated in me systematic hard work capabilities. My special thanks also go to rest of my RSC committee member’s Prof. J. R. Panda, and Prof. S. K. Behera for their valuable advice.

Thanks and gratitude to my teachers Professor Ajit K. Panda and Professor Sangram Mudali (presently Dean and Director at National Institute of Science & Technology) for motivating me to pursue my studies in the field of microwave engineering.

I recollect the helpful comments and encouragement provided by Dr. Trilochan Panigrahi, NIT Goa, who was my colleague at National Institute of Science and Technology, Berhampur. I would also like to mention the support rendered to me by my colleagues Prof. Sasmita Nayak, Prof. Harikrushna Gantayat and Prof. Rajesh K. Dash. I further extend my acknowledgement to Prof. M. Suresh for his helpful assistance for countless times.

Finally I convey my respect to my parents, Smt. Indumoti Panda and Shri Bijaya Chandra Panda, for their patience, support and encouragement. I must also mention the encouragement and active cooperation from my brother, and my loving sisters in making me free to pursue this work.

Date: (Asit Kumar Panda)
