

ACKNOWLEDGEMENTS

The last five years that I have spent at KIIT University was filled with fun, excitement, and unforgettable moments that I can cherish throughout my whole life. I am indebted to so many people that I have met during my Ph.D. studies and I feel lucky to have them as my teacher in life.

I would like to express my sincere gratitude to my advisor and mentor, Dr. S. K. Mandal for his invaluable guidance and encouragement throughout the work of this dissertation. Whenever I was troubled in the laboratory or outside of school, his wisdom and knowledge have always helped me overcome the troubles. It is hard to thank him enough for his continuous support.

I would like to express my deepest appreciation and gratitude to Prof. J. S. Roy and Prof. S. S. Singh for giving me valuable feedback on my research and serving as my thesis committee member. Their sharp insights have helped me find new research topics and seek for innovative solution to the problems.

I would like to extend my gratefulness to the Management of KIIT University for their whole hearted encouragement and cooperation during my research work. I would like to thank Dean, School of Electronics Engineering, KIIT University for his cooperation and encouragement during this thesis work.

I wish to thank the research group members at KIIT University for their support and friendship. Without the discussions and criticisms, this thesis could not have been possible.

Last but not least throughout my research period everything that I have accomplished was possible because of my husband and my daughter. Special thanks to them whose encouragement and support and prayer during my Ph.D. work have been invaluable. God has brought me here to Cornell, to grow and to serve those I am lucky enough to know.
