Acknowledgement

"Time present and time past are both
Perhaps present in time future,
And time future contained in time past"

- From Burnt Norton by T. S. Eliot

'The times, they are a-changin', and hence they are recognised for the time future and accredited for all wise suggestions and help that has come through the years it took me to complete the thesis. From the days of brewing thoughts till the time I am writing these lines – my efforts have been supplemented. It is my pleasure and also my privilege to thank all those who have contributed directly or indirectly, to this thesis.

1991, the watershed year of Indian economy highlighting liberalization and its aftermath drew the conscious attention. The academics as well as policy makers debated over the issue. And I being a student of economics was a little more curious then. The urge to adequately relate to this facet has helped me to develop an interest to understand the dynamics of the new regime. This is perhaps what motivated me to work in this area. Thanks to CESP, all my basic questions were answered with sound logic and justification. The early training in CESP (in my MA classes) was the most powerful catalyst to give my thesis a shape. This thesis did not quench my thirst to understand the Indian economy. It only adds a wood-stick to the burning queries. To me, the completion of this work is just the end of a beginning. The entire process helped me to learn how to ask a meaningful question and how to search a scientific answer. For this, I completely owe to CESP.

I started my arduous journey with my supervisor, Prof. Abhijit Sen. In spite of his busy schedule at the Commission for Agricultural Cost and Prices his unperturbed interest in my work helped me sail through. Prof. Sen’s guidance and innovative ideas provided all the initiatives with which I could complete the work. Various discussions with him whether in the computer room, or in the CESP corridor in sunny winter mornings, or in the deserted vacation time were not only prolific but also equally encouraging. The prolonged conversation at Poorvanchal, sometimes literally snatchning the time he owed to little Jahnnavi, helped this thesis to get its final contour. The accuracy with which I am able to present my work is because of him. Thus, my sincere regards goes to 'Sir'. Jayati (Madam), adorable as she is, with her brilliant tips and necessary intervention was a constant source of inspiration.

I record my reverence to the other teachers at CESP, whatever I have learnt during these academic years was shaped by their valuable insight and guidance. I owe specially to Prof. Anjan Mukherji for his help in solving mathematical problems, Prof. Ramprasad Sengupta for checking some of the derivations, Prof. D. N. Rao for discussing econometric issues, Prof. Kunal Sengupta for his valuable suggestions regarding dynamic optimization and Dr. Sugata Dasgupta for helping me understand the dynamics of quasi-fixed inputs in a production function relation.

I would also like to thank my friend, Dr. Diganta Mukherji from ISI, Calcutta for his help in the modeling part of my study. A very short discussion with Prof. B. N. Goldar, IEG, Delhi, Prof. K. L. Krishna, Delhi School of Economics and Prof. Subal Kumbhakar, University of Texas, Austin were very fruitful. Thanks to Prof. Catherine Morrison for answering my queries through e-mail.

Mr. G. Y. Narayan from Cement Manufactures’ Association (CMA) was always very helpful. He not only provided the requisite information but also took the initiative to discuss various results related to the concerned industry. Officials from Organisation of Pharmaceutical Producers of India (OPPI) never hesitated to send me their reports whenever I so desired. Mr. P. S. Khanna, the then resident Director of OPPI at Delhi was generous enough to discuss the views
of his organization. Mr. Bimal Jain from Indian Sugar Mills Association (ISMA) has spent lot of
time with me analysing the dynamics of sugar industry. Officials from National Federation of Co-
operative Sugar Factories (NFCSF) supplied industry level information as well as articles
concerning important issues. Thanks to them. While working on this thesis, I have benefited
heavily from several libraries. These include JNU, ISID, NIPFP and RBI.

My friendship with Prithwis since last 15 years probably spells everything. Close to me
as a friend as well as classmate, his contribution to my research is colossal. Whether in need or
otherwise, Som was always there. His presence makes me feel buoyant. The research inputs
provided by him are praiseworthy. Friends like Mousumi, Sabya, Uday, Malini, Sunil, Raghu,
Chatto, Ranja, Subrata and others gave me the time for valuable discussions. It would be a lapse
on my part if I fail to recognize the keenness with which Sabyasachi Mitra did attend to the
problems related to chapter III of my thesis. I warmly acknowledge a debt to them all.

Periyar was my home away from home. The so-called Periyar squad comprising Abhijit
(Mukhopadhaya), the poet turned politician; Palash, the cynical guitarist; Jaideep, the fantasy fan;
Sumitro, the bohemian Chinese; the juniors - Abhijit (Pathak), Surajit, and Manish were
unfailingly supportive. Often I took them for granted; yet their help either in typing or in
supplying study materials, or in making comments on some part of my thesis and encouraging me
in their own ways was precious. My association with the squad remains remarkable and I am
indebted to them for reasons more than one. Biplab’s role in providing a special support during
my stay at Periyar deserves mention and I thank him. Mates like Manoj Mishra, Manoj R, Robert,
Anil, Aniyan, Shantu (Fuzzy), Devendar, Chanchal and Babu also added colour to my hostel
life.

Anit’s concern about my endeavor from afar was motivating. I have also benefited from the
articles sent to me by Sarvatom Rao and Tridip Ray from abroad and so do I thank them. I
treasure my friendship with Mini, Sandip, Rintu, Dipanwita, Leni, Saumya, Chandrima,
Triptendu, Sabya (Mitra) and Sonali. Their trust in me has made me confident. They have been
of great help in numerous occasions.

For any work done, there are many who are behind the scenes and remain unnoticed but
have commendable influence over the same. This is true here also. Ananda Maharaj and Prof.
Mrinmoy Bhattacharyya from RKM Vidyamandira, were among the well-wishers who inspired
having greater visions. In this connection, I would also like to mention Ms. Arati Chatterjee who
was eagerly waiting to see this work done. Genuine care and encouragement that they bestowed
helped me look forward.

I am grateful to Prof. B. Bhattacharyya from IIFT, his concern thus creating a suitable
ambience for research buttressed my interest to cater to wider areas. I also thank my colleagues
from IIFT as they have rendered valuable help in times of need.

Rajaji, Bishiji and Bachhe Singhji from the office of CESP have also been of immense
help at various stages.

I thank Meghna not only for being my-o-my but also for her critical comments on several
parts of the thesis. Her intelligent eyes helped me fine-tune the thesis.

My grandfather would have been possibly, the happiest man to see me complete the
thesis. And I think it would be euphoria to convey it to him personally. But he was in a hurry to
leave for eternity. My heart-felt gratitude goes to him for being my philosopher and guide.

This work is dedicated to my parents for reasons obvious. The pain within, which they try
to suppress but is evident in their eyes since so many years, as I remain away from home, is their
share in my work. Their incessant love and warm appreciation as I took each step ahead
augmented my interest in the work. To them, I owe my entire life.

Though this thesis embodies the help and influences of many, I pen-off being solely
responsible for all errors that remain.
