INTRODUCTION

1.1 Blood – The fluid of life
1.2 What is blood?
1.3 Function of Blood
1.4 Blood as a Transport System
1.5 The clotting process
1.6 Transport of gases by Blood
1.7 Characteristics of Blood
1.8 Composition of Blood
1.9 Formed elements
1.10 Plasma, white Blood cell and Red Blood cells
   1.10.1 Red Blood Cells
   1.10.2 Plasma
   1.10.3 Platelets
   1.10.4 White blood cells
1.11 Hemoglobin
   1.11.1. Structure
   1.11.2. Binding of Ligands
   1.11.3. Degradation of Haemoglobin
   1.11.4. Similar proteins
   1.11.5. Hemoglobin synthesis
1.12 Anticoagulants
   1.12.1. Process of clotting
   1.12.2. Mechanism of clotting
   1.12.3. Types of Anticoagulants
   1.12.4. Endogenous Inhibitors of clotting
1.12.5. Exogenous Inhibitors of clotting

1.13. Literature Survey

Chapter 2

THEORETICAL ASPECTS

1.1. Dead – Load Viscometers
1.2. Gas Viscometers
1.3. Counter Pressure Viscometers
1.4. Constant Rate Capillary Viscometers
1.5. Dead – Load Viscometers with variable loads
1.6. Glass Viscometers
1.7. Rotational Viscometers
   1.7.1. Concentric Cylinder Viscometry
   1.7.2. Conical Surface Viscometers
   1.7.3. Coni – Cylindrical and Biochemical Viscometers
   1.7.4. Disk Viscometers
   1.7.5. Sphere – Sphere Viscometers
   1.7.6. Mono Spherical Viscometer
1.8. Falling Ball Method
   1.8.1. Correction for Non – Newtonian effect
   1.8.2. Rolling Ball Method
1.9. Falling Cylinder Viscometer
1.10. Theoretical considerations of the present technique.

Chapters 3

MATERIALS AND METHODS

3.1. Sample Collection
3.2. Screening for Diseases Transmitted by Blood
   3.2.1. Detection of Hepatitis – B – Surface Antigen (HBs Ag)
3.2.2. Detection of Antibody To HIV – I & HIV – 2 by ELISA
3.2.3. Detection of Antibodies to Syphilis by VDRL Test
3.2.4. Detection of Antibodies to Plasmodium Falciparum (Malaria)

3.3. Anticoagulants

3.3.1. Ethylene Diamine Tetra Acetic Acid (EDTA)
3.3.2. Heparin
3.3.3. Double Oxalate
3.3.4. Potassium Oxalate
3.3.5. Fluoride
3.3.6. Tri Sodium citrate
3.3.7. Acid Citrate Dextrose
3.3.8. Citrate Phosphate Dextrose (CPD)
3.3.9. Citrate Phosphate Dextrose Adenine (CPD-A)
3.3.10. Optimal Additive Solutions (OAS)

3.4. Estimation of Hemoglobin by cyanmethemoglobin method.
3.5. Estimation of pH of Human blood
3.6. Estimation of Electrical conductivity of Human blood
3.7. Experimental Technique

Chapter 4

RESULTS

Chapter 5

DISCUSSION
