Acknowledgements

‘Dissertation of an original research’ is what we call the ‘Thesis’. However, I would call it “An Evolution” - involving a gradual revelation of the intricacies and complexities in life for us to become better adapted individuals. This experience for me is an enrichment of interactions, however brief, with people around, making me realise the spatial and temporal significance of each and thus strengthening my faith in “Him”.

The work on my Thesis began with a concept which my Supervisor, Dr. P.C. Rath put forth and his contribution in all capacity—practical and intellectual has been vital for me to give form to my research. I began my story with the mouse IRF-1 cDNA (pIRFL) which was a kind gift from Prof. Tadatsugu Taniguchi, University of Tokyo. The School of Life Sciences is where I belong and this ‘belongingness’ is the consequence of the concern and affection shown by all, big or small. To begin with I wish to thank Dr. Alok Bhattacharya, Dean, School of Life Sciences not merely for facilitating the carrying out of our research work smoothly but for taking innovative steps in generating forums for scientific interaction, like the ‘Biosparks’. I would like to acknowledge the former Deans of our School, Prof. Najma Bacquer, Prof. Rajendra Prasad, Prof. K.C. Upadhyaya and Prof. Rajiv Saxena for extending their support and help during this tenure. Prof. Rajendra Prasad and Prof. P.K Yadava have been two people whose concern, advice and care through the years has never let me feel that I was not one of their students. Words to thank them are just beyond my comprehension. No less has been the encouragement and support extended by Prof. A.R. Rao, Prof. R.N.K. Bamezai, Prof. Neera Bhalla Sarin, Prof. R.K. Kale, Dr. Deepak Sharma, and Prof. R. Madhubala adding the additional energy in my research. I wish to acknowledge Prof. M.M. Chaturvedi from BHU, Benaras and Dr. Murli from CDFD, Hyderabad for those critical discussions enabling me to analyse my work better. The sojourn at Cold Spring Harbor Laboratory, New York in 2001 where I got the opportunity to attend a course on ‘Eukaryotic gene Expression’ and a meeting on the ‘Mechanisms of Transcription’ was a dream come true bringing me face to face with the Stalwarts in Science, like James D. Watson, Robert Roeder, Robert Kingston, James T. Kadonaga so on and so forth. My instructors at the Course: Marc Timmers, Brian Dynlacht, Jackie Lees and James
Goodrich were people who took pains not just in elucidating the concepts in Transcription but instilling in us a teeming confidence to return with. I consider myself fortunate to have got their guidance at the right juncture of my research.

A journey is easier when you travel together. Interdependence is certainly more valuable than independence. This thesis is the result of work where I have been accompanied and supported by many, almost everybody in the School. Today while writing it's Acknowledgements it gives me pleasure to have an opportunity to express my gratitude to all of them: Preeti, Sudhakar, Tulika, Naseem, Nivedita, Pratima, Dibendhu, Sudhanshu, Varsha, Pratima and Tiklal Ji in Prof. Prasad's Lab.; Jitendra, Ravindra, Trisha and Mahima in Prof. Yadava's Lab.; Mukesh, Prem, Suchandra, Nidhi, Manoj and Aslam in Prof. N.B. Sareen's Lab.; Vibha, Neel, Manveen, Sindhu and Sanghamitra in Dr. S.K. Goswami's Lab.; Paromita, Satish, Shoma, Divya, Prabhat, Alka, Ruchi and Rekha in Prof. A. Bhattacharya's Lab.; Bindu, Poonam, Prasad, Angana, Vandana and Sridevi in Prof. Madhubala's Lab.; Anjana, Vikas, Rajni and Jiang in Prof. A.K. Verma's Lab.; Faisal, Vibha, Dinesh, Dola and Ganesh in Prof. B.N. Mallick's Lab.; Sonal, Himanshu and Rana in Dr. Natarajan's Lab.; Gopal and Sasmita in Prof. B.C. Tripathy's Lab. The Class of '97, my batchmates who've been by me through thick and thin are Varsha, Neerja, Manjishtha, Asmita, Deepali, Nivedita, Anita, Narendra, Gagan and Prassana. During the initial phases it was the cooperation of my Seniors that kept me going. Sanjiv, being miles away, has to date never ceased from offering his help. I cannot think of a beginning, more comfortable and joyous without Mitali, Gagan, Indranil, Andrew, Ramesh, Neeraj, Shiva, Dhananjay, Biswaranjan, Jaspreet, Saubiya, Gayatri and the rest of the group. I do consider myself fortunate to get the concern and care, academic and non-academic, from friends all over JNU. This is one time to thank all of them: CBTi- Gautham, Amjad, Sarita, Puneet, Veenu, Ruchi, Poonam, Palash, Ramni, Alli, Sujata, Praveen, Nidhi; Meenakshi J., Amupama and Mithu from SES.

Very often during the course of the journey we are at a 'crossroad'. At this moment of perplexion there is somebody whom 'God's sends to the rescue. Agam, at NYU who was then a Research Scientist at ICGEB - was the God sent messenger for me. The lab. couldn't have been a better place for me to work in, without Amar jyoti and
Ritumala. It's difficult for me to give a name to this enriching relationship but definitely--it would be an everlasting one. I thank Raju, Krishna, Kiran and Vinod for their constant encouragement and Mr. Panwar for his help. I am thankful to Late Bhagat Ram Ji and Chotelal Ji for their concern and help in the lab. Help and encouragement from the staff of the Central Instrumentation Facility, Mr. Alexander, Mr. Khan, Mr. S.K. Sharma, Mr. S.K. Misra, Balwant, Rajinder and Aslam is greatly acknowledged.

Friends, very close to me... it's immaterial whether I mention them here or not but I want them to know that they are dear to me... Kelly & Sagar, Neera, Manju & Shikhar, Neeti & Yogesh, Bharati & Ravi, Garima & Vivek, Sapna, Meena, Riju, Bala, Raza and Madhu. I wish to thank Neera's parents who were always there to encourage me throughout my doctoral thesis. Ashish, Ramesh, Paul, Bidisha and Santanu were friends whom I made in the US and I consider myself fortunate that in these two most tirading years of my research they've been by me.

The 'Adharshila'—Foundation to what I am today is my Family. It is the 'Sanskars' instilled in us by my parents that have given us the strength to fare through all the tough times.

I would like to acknowledge the Council of Scientific and Industrial Research and the University Grants Commission, Govt. of India, for the Fellowships awarded to me. I wish to thank the DST, Commonwealth Science Council, U.K. and the Cold Spring Harbor Laboratory, N.Y. for providing travel and registration assistance for the 'Eukaryotic gene expression course' that I attended in 2001.

Meenakshi Upreti
