### ABBREVIATIONS

### INTRODUCTION

1-4

### REVIEW OF LITERATURE

5-41

#### Characteristics of the chickpea crop

- Classification 5
- Distribution and yield 5
- Ecology 6
- Origin 6
- Composition 8
- Uses 8
- Constraints on productivity of chickpea 9

#### Molecular markers for plant genome analysis

- Origin of DNA markers 10
- Molecular Basis of DNA Markers 11
- Types of DNA markers 12
- Amplified fragment length polymorphism 12
- Microsatellite markers 14
- Advantages of DNA markers 15
- Desirable properties of molecular markers 15
- Applications of DNA markers 15
- Detection of Genetic diversity in plants using molecular markers 16
  - Origin and maintenance of genetic variation in plant populations 17
  - Types of molecular markers used for genetic diversity analysis 18
  - Phylogenetic trees 18
  - Recent genetic diversity studies in plants using AFLP 19
  - Genetic Diversity studies in *Cicer* 23
  - Genetic diversity within *C. arietinum* 24
- Genetic mapping using molecular markers 24
  - Comparative mapping 25
  - Markers for genetic mapping 26
  - AFLP and SSR molecular marker maps of plant genomes 26
  - Genetic mapping in chickpea 27
- Mapping of Quantitative Trait Loci (QTLs) using molecular markers 28
  - Recent plant QTLs mapped using AFLP and SSR 29
- Applications of molecular markers in plant breeding programs 29
- Map-based cloning 30
**Contents**

**Bulked segregant analysis**  
- Recent studies using bulked segregant analysis  

**Drought as a major constraint of chickpea**  

**Evolution of photoperiod response in chickpea**  

**The phenomenon of flowering**  
- Multiple pathways regulating the floral transition  
- Floral Transition-Meristem fate changes  
- Recent studies of mapping of QTL(s) associated with flowering time and photoperiod response  

**The flowering genes of chickpea**  
- Genetic control of flowering time in chickpea  

**MATERIALS**  
42-43  

**Plant material**  
42  

**Chemicals**  
42  

**METHODS**  
44-52  

**Storage and germination of plant material**  
44  

**Isolation of plant genomic DNA**  
44  

**AFLP analysis**  
44  
- AFLP library generation  
  - Restriction digestion and adapter ligation  
  - Pre-amplification of adapter-ligated genomic DNA  
- Preparation of DNA bulks for AFLP  
- AFLP primer labeling  
- AFLP selective Amplification  
- AFLP denaturing polyacrylamide gel electrophoresis  
  - Preparation of gel plates  
  - Preparation of 6% denaturing acrylamide gel  
  - Electrophoresis and autoradiography of gel  

**Microsatellite analysis**  
47  
- Preparation of DNA bulks for STMS analysis  
- PCR reaction for amplification of microsatellite loci  
- Gel Electrophoresis for separation of amplified microsatellite loci  

**Size estimation of amplified products**  
48  
- AFLP products  
- STMS products
Contents

Data compilation and analysis 49

- Compilation of AFLP data for genetic diversity studies 49
- Calculation of positive and negative percentage polymorphism 49
- Calculation of recombination frequencies of AFLP and STMS loci with time-to-flowering trait 50
- Calculation of $\chi^2$ values for estimation of segregation distortion 50

Computational analysis 51

- Generation of graphs 51
- Generation of phylogenetic tree 51
- Principal component analysis (PCA) 52
- Student's t-test for determining association of AFLP and STMS loci with time-to-flowering trait 52
- Linkage analysis of AFLP and STMS loci 52

RESULTS 53-71

AFLP in chickpea 53

- Relationship between percentage polymorphism and size range of fragments 54
- Detection of AFLP in the three species of Cicer 52
- AFLP analysis of relationship between C. arietinum and its wild relatives C. reticulatum and C. echinospermum 56
  - Ability of a particular AFLP combination to differentiate between C. arietinum, C. reticulatum and C. echinospermum 56
  - AFLP between any two species of Cicer 57
- AFLP analysis of thirty-eight accessions of Cicer arietinum 58
  - Detection of polymorphism within thirty-eight accessions of C. arietinum 58
  - Ability of AFLP primer combinations to differentiate between thirty-eight accessions of Cicer arietinum 59
  - Distribution and characterization of polymorphic bands among thirty-eight accessions of C. arietinum 60
  - Assessment of various AFLP primer combinations for individual accessions of Cicer arietinum 61

Generation of phylogenetic relationship of thirty-eight accessions of C. arietinum and their wild relatives C. echinospermum and C. reticulatum 61

- Generation of dendrogram 62
- Principal component analysis 63
Contents

Identification of putative molecular markers linked to quantitative trait loci associated with time-to-flowering in chickpea 63
- AFLP analysis 64
  - Preparation of bulks 64
  - Bulked segregant analysis 65
  - Individual plant analysis 66
- STMS analysis 67
  - Preparation of bulks 67
  - Bulked segregant analysis 67
  - Individual plant analysis 68

Residual heterozygosity and segregation distortion of polymorphic loci 69

Association of the polymorphic loci with QTL(s) associated with time-to-flowering trait 70
- Recombination frequency (RF) of AFLP and STMS polymorphic loci with QTLs associated with time-to-flowering trait 70
- Student's t-test of AFLP and STMS polymorphic loci 70

Generation of molecular marker map of AFLP and STMS polymorphic loci 71

DISCUSSION 72-93

Assessment of genetic diversity in chickpea using AFLP 72
- Appearance of bands obtained using AFLP 72
- Genome coverage of AFLP 72
- Integrity of monomorphic and polymorphic AFLP bands 74
- Number and size of scorable AFLP loci 75
- Assessment of AFLP in three species of Cicer 76
- Ability of each primer combination to differentiate between three species of Cicer 78
- AFLP between any two species of Cicer 78
- AFLP analysis of thirty-eight accessions of C. arietinum 79
- Ability of AFLP primer combinations to differentiate between thirty-eight accessions of Cicer arietinum 80
- Characteristics of polymorphic AFLP bands within thirty-eight accessions of C. arietinum 81
- Assessment of various primer combination for individual accessions of Cicer arietinum 82
- Dendrogram and Principal component analysis 83
**Contents**

**Identification of molecular markers linked to quantitative trait loci associated with time-to-flowering in chickpea**  
85

- The parental lines 85
- AFLP analysis 86
  - Bulked segregant analysis 86
  - Individual plant analysis 87
- STMS analysis 88
  - Bulked segregant analysis 88
  - Individual plant analysis 89
- Residual heterozygosity and segregation distortion of twenty-four polymorphic loci 90
- The linkage analysis of polymorphic loci with QTL associated with time-to-flowering trait 91
- Molecular map of the twenty-four polymorphic loci 91
