CHAPTER 4

HYPOTHESIS

4.1 Hypothesis:

1. **Primary**: Participants receiving structured rehabilitation program will exhibit greater improvement in quality of life scores than those receiving standard care after total knee replacement.

2. **Secondary**: Participants receiving structured rehabilitation program will exhibit higher KOOS scores than those receiving standard care after total knee replacement.

4.2 Null Hypothesis:

- Participants receiving structured rehabilitation program will have similar quality of life and KOOS scores as those receiving standard care after total knee replacement.
