Acknowledgements
(Straight from the Heart)

I would like to grab this rare opportunity to thank Dr. Amitabha Chattopadhyay for his excellent guidance throughout my thesis work and stimulating discussions as a supervisor, mentor, teacher and friend. He is one who nurtured my understanding on the organization of biological membranes and fluorescence spectroscopy. His excellent criticisms have helped me immensely to correct my faults and made me a better person professionally than what I was when I had joined this lab. I personally feel that it is a great privilege to work with him, and throughout the course of my work, it was an educative experience for me. Not only he supervised my thesis work, but also taught me the intricacies of writing scientific manuscripts and reviewing research articles.

I sincerely thank Prof. Dipankar Chatterji and A. Sharada Devi for help with the program used for calculation of the spectral overlap integral, and Dr. Somdatta Sinha for help with the program used for simulation of energy transfer efficiencies using numerical integration in Chapter 5. I gratefully acknowledge Rukmini for providing help in membrane penetration depth experiments for the work presented in Chapter 5 of this thesis. I thank Dr. R. Nagaraj and C. Subbalakshmi for help with the membrane permeabilization assay.

I sincerely thank all my beloved lab members for their help and critical suggestions. In particular, I would like to thank Shanti, Devaki, Thomas and Soumi for correcting all my manuscripts and the Introduction section of the thesis, which has resulted in improving the quality of the manuscripts. I must thank Yamuna and Ajuna for their kind help in correcting the thesis effectively, when it mattered most, within a day. In addition, I wholeheartedly thank Soumi for her generous help and compassion at various times in various ways during my stay in CCMB.

I gratefully acknowledge the Director, Dr. Lalji Singh, for providing excellent facilities round the clock, and the Instrumentation group for maintaining them with utmost care. In particular, I would like to express my gratitude to Mr. Sekhar Ramachandran, Ms. Asha Ramesh and Ms. Vanaja for the excellent maintenance of the steady state fluorimeters, absorption and circular dichroism spectrophotometers. I cannot
forget the ungrudging help, especially at odd hours, rendered by Mr. Y.S.S.V. Prasad and Mr. G.G. Kingi in doing time-resolved fluorescence experiments. Further, I wish to acknowledge Mr. Prem Kumar of the Drawing Section for some of the initial artworks, and Devaki for her help in creating the model presented in Chapter 5 of this thesis. I also thank Mr. Giridharan for the help provided at the digital imaging facility, and Mr. Prakash and Mr. Mallesh for the help in photocopying my thesis. I would also like to acknowledge Ms. Rajeshwari Srinivasan and Mr. Ranga Rao for their secretarial work.

I sincerely thank all the members of the faculty, who taught me during the course work.

I would like to acknowledge the friendly atmosphere provided in the lab by Hari, Sattu, Bala, Samares, Shanti, Devaki, Thomas, Soumi, Ajuna, Yamuna, Jafri, Sandeep, Yousuf Sahab, Lakshmi and Sarwaruddin. I never felt a dull moment in the entire course of my stay in CCMB and part of the credit goes to Ravinder and Naseeruddin whose 'A class' jokes made me feel better. Further, I wish to thank Ravinder for his homeopathic medicines. In addition, my friendship with Rajesh and Soumi is of special one and I would cherish it for long. I am grateful to all my friends in CCMB (that includes persons from security, workshop, canteen, guest house etc.) in general, and Gurudatta, Srikantan, Suhasini, Savithri, Amritha, Roshni, Súbree, Kiran in particular, for making my stay in CCMB a memorable one. In addition, I would like to thank Dr. Deepa Chattopadhyay for her friendship.

My special thanks are due to my best friend, Deepa Natarajan, for her constant support and encouragement. I would not have joined CCMB without her untiring efforts in sending the application form even without my knowledge.

I gratefully acknowledge the support of the University Grants Commission (UGC) for the award of Junior and Senior Research Fellowships, and the Council of Scientific and Industrial Research (CSIR) for the fifth year fellowship. In this connection, I would like to thank Dr. Lalji Singh and Dr. Mashelkar for their sincere efforts in providing me an opportunity to get the fifth year fellowship.

Finally, I would like to express my gratitude to my beloved parents and family for their unrelenting faith and constant encouragement.
