CHAPTER 6

CONTRIBUTIONS, LIMITATIONS AND FURTHER SCOPE OF STUDY

The contribution of the research to the society:

- Any school can transform itself into an extraordinary system of quality education by religiously following the outcomes and processes of this research...

- This unique research covers almost all aspects of a complex school system.

- As the schools are the place where we prepare future citizens of our country so this research can prove as a great asset for society and nation if taken properly.

- The research may be an asset to improvise the whole education system and to improve the life of millions of student, parent, teachers who are associated with education in direct or indirect ways.

LIMITATIONS:

- It was difficult to convince the school authorities to share their data and permission for an access to the stakeholders i.e., staff, students, and parents for the survey.

- It was a difficult to find enough time with the staff members in the conditions where they were mostly engaged in their regular duties.

- In the classes filled with students, it was difficult to select sincere students who were actually interested in sharing the views and experiences.
• It was again a very difficult task to contact parents in the school as they do not visit regularly to the school and also had limitations of time and interests in answering all the questions.

• A collection of data from each school was a very time taking process due to large numbers of respondents and fairly larger numbers of questions framed in order to cover most of the aspects related to quality education.

• It was difficult to address some of the local issues which were found different for each school depending on area and demography of the respective regions.

• CBSE is a very dynamic board and its parameters keep changing every next day, so maybe some of the recent changes brought by CBSE after the surveys were left to be incorporated in the questionnaire process.

• The findings of the study are based on the responses given by the respondents whose readiness to give correct information in itself may be questionable due to perceptual distortions, which may be considered as limitations.

• Although the time lag in the collection of data and preparations of research findings was not significant it may have caused a change in the perception of respondents. The current study is a cross-sectional study. The time lag can be addressed in future studies by conducting a longitudinal study thus establishing a cause and effect relation between different variables leading to widening of the scope of the study.

• As the CBSE schools are scattered in the whole of the country and have a number larger than 1.5 lakhs, so a survey of 10 schools may not be representing all the aspects all the schools covered under CBSE.
Future Scope of Study:

Although I have made the attempt to cover almost all the possible aspects need to be addressed for the purpose of quality education, but as CBSE itself keeps on bringing new alterations such as recently have discontinued with the internal assessment system for class X and has introduced new remodeled assessment structure effective from next session, so a detailed study can be made to understand the benefits and challenges of the new system introduced and also a comparison can be made of the new examination pattern with the old pattern of CCE.

Research can also be done on the causes and remedies which are forcing our students to be drifted towards unreasonably costly coaching institutes leaving the schools, similarly research can also be made to bring the measures of inculcating self-discipline as the present generation is totally miss-directed and growing indiscipline is observed by the impact of social media and erosion in value system.

Research can also be made to study the impact of CBSE upgradations on other state boards and also findings can be made about the good practices by different state boards which should also be implemented by CBSE.

Besidesthis, almost each of the domains covered by me has the potential of being explored separately as a new research topic and a longitudinal study can prove to be useful for reaffirming the findings of the study.
