List of Figures

2.1 A three layer ANN .................................. 23
2.2 Temperature in terms of continuous fuzzy membership function ... 23
2.3 Temperature in terms of discrete fuzzy membership function ........ 24
2.4 Fuzzy membership function .................................. 24
2.5 Definition of medium ....................................... 25
2.6 Definition of low, medium and high linguistic labels ................. 26
2.7 Area that needs to be defuzzified ................................ 27
2.8 Defuzzified output crisp values .................................. 27
2.9 Block Diagram of Fuzzy Inference System .......................... 28
2.10 ANFIS Architecture ........................................... 28
3.1 RMSE values of forecasting results for each set of clusters ........... 35
3.2 Forecasting results of the BSE index .................................. 35
3.3 Forecasting results of the TW index .................................. 36
3.4 Forecasting results of the HS index .................................. 36
3.5 Forecasting results of the NIKKEI index ............................... 37
4.1 Schematic diagram of proposed model sequence ......................... 49
4.2 The forecasting results of proposed model ................................ 50
5.1 Proposed model sequence ........................................... 64
5.2 Performance comparison of proposed model 1 for different $\alpha$ values
    in terms of RMSE ............................................. 65
5.3 Performance comparison of proposed model 2 for different $\alpha$ values
    in terms of RMSE ............................................. 65
5.4 Performance comparison of proposed model 1 with different models
    in terms of RMSE ............................................. 66
5.5 Performance comparison of proposed model 2 with different models in terms of RMSE .................................................. 66
5.6 Performance comparison of proposed model 1 and model 2 in terms of RMSE ............................................................... 67
5.7 FCM cluster center for the year 2006 ............................................. 67
5.8 Subtractive clustering cluster center for the year 2006 ....................... 68
5.9 Model 1 final input membership function for the year 2006 ............... 68
5.10 Model 1 final input membership function for the year 2007 ............. 69
5.11 Model 1 final input membership function for the year 2008 ............. 69
5.12 Model 1 final input membership function for the year 2009 ............. 70
5.13 Model 1 final input membership function for the year 2010 ............. 70
5.14 Model 1 final input membership function for the year 2011 ............. 71
5.15 Model 1 final input membership function for the year 2012 ............. 71
5.16 Model 2 final input membership function for the year 2006 ............. 72
5.17 Model 2 final input membership function for the year 2007 ............. 72
5.18 Model 2 final input membership function for the year 2008 ............. 73
5.19 Model 2 final input membership function for the year 2009 ............. 73
5.20 Model 2 final input membership function for the year 2010 ............. 74
5.21 Model 2 final input membership function for the year 2011 ............. 74
5.22 Model 2 final input membership function for the year 2012 ............. 75

6.1 Process flow diagram of the proposed model .................................. 90
6.2 Proposed expert system returns with respect to Sensex for the year 2013 ........................................................................ 91
6.3 Proposed expert system returns with respect to Sensex for the year 2009 ........................................................................ 91
6.4 Comparison of proposed portfolios with existing portfolio techniques for the year 2013 .......................................................... 92
## List of Tables

2.1 Most commonly used operators ........................................ 16
3.1 Training and Testing Data ........................................... 31
3.2 Correlation coefficient for different no. of clusters for each stock market 34
3.3 Comparison of Proposed model with existing models in terms of RMSE 34
4.1 SRA Results .......................................................... 42
4.2 Correlation coefficient matrix of selected attributes .................. 43
4.3 Eigenvalues and cumulative variance .................................. 43
4.4 Loading values $\alpha$ for selected principal components ............... 44
4.5 RMSE value for different combinations of principal components .... 45
4.6 Output membership function parameters ................................ 46
4.7 Performance comparison of different models .......................... 47
5.1 OWA weights when $n = 3$ ........................................... 56
5.2 Fuzzy parameters for the year 2006 ................................... 59
5.3 Performance comparison of different models in terms of RMSE ....... 60
6.1 Stocks in Sectors ...................................................... 78
6.2 Financial ratios ........................................................ 81
6.3 Clustering arrangement of 2009 for different values of $\lambda$ for investment valuation ...................................................... 82
6.4 Clustering arrangement of 2009 different values of $\lambda$ for Profitability . 82
6.5 Clustering arrangement of 2009 for different values of $\lambda$ for liquidity and debt coverage .................................................. 82
6.6 Clustering arrangement of 2009 for different values of $\lambda$ for management efficiency ...................................................... 83
6.7 Representative indicators for each group of financial ratios for 2009 . 83
6.8 Stock weights recommended by proposed expert system for the year 2009 ................................. 88
6.9 Stock weights recommended by proposed expert system for the year 2013 ................................. 88
6.10 Portfolios suggested from the existing literature [76], for the year 2013 89
