Acknowledgements

It feels a deep sense of gratitude and extreme happiness to acknowledge people who helped me in obtaining a not-so easy Ph.D. degree by providing constant support, help and encouragement. The journey was not possible and was made easier with each one of you around. At this important juncture of my life, I feel overwhelmed to express my sincere word of thanks to all those who have been with me, directly or indirectly supporting me and making this tenure an unforgettable experience.

First of all it is “The Almighty” before whom I bow my head with great reverence because without His everlasting and auspicious presence in my very being it would never have been possible to come out with this enormous task successfully.

I extend my profound regards and deep sense of gratitude to my supervisor, Dr Neelam, Professor and Chairperson, Department of Microbiology, Kurukshetra University, Kurukshetra, for her valuable advice, splendid supervision and constant patience throughout the period of my research work. My thesis could not have seen the light of the day without her constant encouragement and confidence-imbibing attitude. Her dedication had humbled me in many ways. It was her valuable discussions and endless endeavors through which I have gained a lot. She has always been a source of inspiration and moral support for me. I am extremely thankful to her for imparting brilliant guidance, encouragement and whole hearted cooperation throughout the work. Thank you Mam, for making things easier and achievable for me. This would not have been possible without your support.

I would like to express my sincere thanks to Dr. Ritu Mahajan, Department of Biotechnology for her immense concern throughout the purification work.

I owe a special word of thanks to all the faculty members of Department, Dr. Neeraj Kumar, Dr. Baljeet Singh Saharan and Mr. Vijay for their constant encouragement and support throughout this duration.

I feel lacunae of words to express my most heartfelt and cordial thanks to my friends, who have always been a source of inspiration for me and who stood by my side at the toughest times. Not forgetting, fellow friends, Gaurav Garg, Kumkum Verma, Pooja Verma, Pooja Dabas, Romika Dhiman, Rajesh Kumar, Simran Jot Kaur, Kanika and Divya who had been supportive, patient and helpful. Thank you for those crazy ideas which in one way or another had worked. I am indebted for the wonderful memories that we shared together. I wouldn’t have done it without you all.
I shall be failing in my endeavours for not recognizing and acknowledging the help and support received from the nonteaching staff of the department, Dr Subash, Sh. Ashok Kumar, Sh. Umed Chand, Sh. Hriday Ram, Sh. Inder Raj and Ms Komal.

Most importantly, none of this work would have been done without the support of my dearly loved parents’ Sh. Jasmer Singh and Smt. Santosh Rani, Brother Ramneek Singh kashyap and sister Reena kashyap, who have all supported me wholeheartedly throughout my life. It was their unshakable faith in me that has always helped me to proceed further.

I am short of words to express my heartfelt thanks to my ever loving son Rehan kashyap for his perpetual love and sacrifice. His innocence always helped me in coming out of many frustrating moments during my Ph.D. I would also like to appreciate my husband Mr. Nishant Kashyap for his constant support, understanding, patience and love.

I take this opportunity to sincerely acknowledge the UGC, Government of India, New Delhi, for providing financial assistance under the major project “Exploitation of microorganisms for chitin deacetylase production” in which I worked as a project fellow.

Last but not the least; I would like to thank the almighty whose blessings have enabled me to accomplish my Ph.D. Thesis work successfully. Finally, I wish to extend a warm thanks to everybody involved directly or indirectly with my work as well as expressing my apology that I could not mention personally one by one.

Date (Sonu Rani)
