As I finally come to the point of finishing my work, I thank almighty God for abiding with me throughout the past years and by His mercy and grace, in giving me strength and wisdom to pursue and complete my work successfully.

I would like to express my deep and sincere gratitude to my most respected supervisor, Prof Ramesh Sharma for allowing me to work under his supervision. It was through his able guidance, encouragement and selfless efforts that make this thesis work a successful realization. His disciplinary nature, patience and insight knowledge have made me aware and understand life in a broader perspective. I will forever remain grateful to him.

I convey my regards to all my dear teachers in the department for the efforts they have done in my career besides all the necessary help they provided for my work. I do acknowledge the support that I received from the department staffs and I am grateful to all of them for assisting me in times of my needs.

My special gratitude is due to my beloved mom Arjancy who remains a source of hope and inspiration for me. It is through her constant prayer and moral support that I could able to endure all difficulties, which help me to progress throughout my life. My lovely sisters Lala and Angeedy and Henry, Tami (brothers) deserves a special mentioned for their love, encouragement that uplift my strength and spirit to move forward with joy everyday with a feeling of contentedness.

I am extremely grateful to all my lab mates for being wonderful friends to me. I would like to thank Daniel, Piyali, Preeticia, Bantei, Wanai, Teikur and Iba for their friendship and help in the past years of working together. Piyali deserves a special note of thank on whose selfless guidance and directions make my initial research work easier and path breaking. I would always cherish the stimulating, brainstorming discussions and the fun we had together. You all my lab buddies made our lab a convivial place to work and that have inspired me in my day to day research. My life becomes more of a realist and less of a dreamer through our interactions during the long hours in the lab and this association of togetherness indeed, is something I will miss forever.
I wish to thanks all my fellow friends, research scholars and hostellers under whose companies make my stay in Nehu a memorable one. Sharing joy together, helping each other in times of needs and moving forward together with a common dream reflects the brighter side of life in the midst of our busy days. It's my prayer that God will bless them and help them achieve their respective dreams.

A sincere note of appreciation goes to Bah Lum and Bah Sngaied of Pasteur Institute, Shillong for their tremendous help. A special homage to the docile creatures (mice) who silently sacrificed their lives for the cause of this study.

Last but not the least, I am grateful to the Department Of Biochemistry, North Eastern Hill University, Shillong for providing me research facilities. I am indebted and grateful to University Grant Commision (UGC), New Delhi for providing financial assistance as JRF and SRF positions throughout my five years of working.

Finally, I would like to thank everybody who was important to the successful completion of this thesis.
