List of Figures

Figure 1.1 Stages of biofilm formation.............................................. 7
Figure 1.2 Bacteria surrounded by the EPS................................. 11
Figure 2.1 Monthly variation in the load of BAB in WW microcosm..... 39
Figure 2.2 Monthly variation in the load of BAB in MTP microcosm.... 40
Figure 2.3 Monthly variation in the load of BAB in HRW microcosm... 41
Figure 2.4 Monthly variation in the load of BAB in PDW microcosm.... 42
Figure 2.5 Monthly variation in the load of BAB in PDWI microcosm... 43
Figure 2.6 Relative load of BAB in various drinking water microcosms from March 2009 to February 2010........................................ 44
Figure 2.7 Difference in the load of BAB between the types of water..... 48
Figure 2.8 Nitrate concentration in the collected samples............... 49
Figure 2.9 Phosphate concentration in the collected samples.......... 49
Figure 2.10 Percentage of biofilm associated bacterial genera isolated from WW microcosm................................................. 50
Figure 2.11 Percentage of biofilm associated bacterial genera isolated from MTW microcosm.......................................................... 50
Figure 2.12 Percentage of biofilm associated bacterial genera isolated from HRW microcosm....................................................... 51
Figure 2.13 Percentage of biofilm associated bacterial genera isolated from PDWI microcosm......................................................... 52
Figure 2.14 Percentage of biofilm associated bacterial genera isolated from PDWI microcosm......................................................... 52
Figure 2.15 Percentage of resistance of BAB isolated from drinking water microcosms to various antibiotics................................. 54
Figure 2.16 Statistical variation of MAR among different drinking water microcosms................................................................. 55
Figure 2.17 Dendrogram of antibiotic resistance profiles for the BAB isolated from various drinking water microcosms determined by Euclidian metric, average linkage analysis............................ 57
Figure 2.18 Dendrogram of antibiotic resistance profiles for BAB isolated from WW microcosm......................................................... 59
Figure 2.19 Dendrogram of antibiotic resistance profiles for BAB isolated from MTW microcosm......................................................... 60
Figure 2.20 Dendrogram of antibiotic resistance profiles for BAB isolated from HRW microcosm................................................. 61
Figure 2.21 Dendrogram of antibiotic resistance profiles for BAB isolated from PDWI microcosm.............................................. 62
Figure 2.22 Dendrogram of antibiotic resistance profiles for BAB isolated from PDWII microcosm............................................. 63
Figure 4.1. Prevalence of antibiotic resistance in BAB from PDW......... 120
Figure 4.2. Percentage of antibiotic resistant BAB............................. 121
Figure 4.3. Percentage of BAB showing multiple antibiotic resistance (MAR index ≥ 0.2)............................................................ 121
Figure 4.4. Percentage of haemolytic BAB in the PDW samples.......... 128
Figure 4.5. Extracellular enzyme production potential of BAB in PDW.... 129
Figure 4.6. Percentage of BAB capable of producing at least one extracellular enzyme.......................................................... 130
Figure 4.7. Percentage of BAB capable of producing multiple enzymes... 130
Figure 4.8. Percentage of BAB with all the tested features of virulence..... 134
Figure 6.1 Survival of *E. coli* in the biofilm formed in non-chlorinated MDWDS................................................................. 170
Figure 6.2 Survival of *E. coli* in bulk water of non-chlorinated MDWDS............................................................................. 171
Figure 6.3 Relative survival of *E. coli* in the biofilm and bulk water of non-chlorinated MDWDS................................................... 172
Figure 6.4 Survival of *E. coli* in the biofilm developed in chlorinated MDWDS................................................................. 173
Figure 6.5 Survival of *E. coli* in bulk water of chlorinated MDWDS............................................................................. 174
Figure 6.6 Relative survival of *E. coli* in the biofilm and bulk water of chlorinated MDWDS................................................... 175
Figure 6.7 Relative survival of *E. coli* in the biofilms of non-chlorinated and chlorinated MDWDS................................................... 176
Figure 6.8 Relative survival of *E. coli* in the bulk water of non-chlorinated and chlorinated MDWDS................................................... 177
Figure 6.9 Survival of *S. enterica* in the biofilm formed in non-chlorinated MDWDS................................................................. 178
Figure 6.10 Survival of *S. enterica* in bulk water of non-chlorinated MDWDS............................................................................. 179
Figure 6.11 Relative survival of *S. enterica* in the biofilm and bulk water of non-chlorinated MDWDS ........................................... 181

Figure 6.12 Survival of *S. enterica* in the biofilm formed in chlorinated MDWDS ................................................................. 182

Figure 6.13 Survival of *S. enterica* in the bulk water of chlorinated MDWDS ................................................................. 183

Figure 6.14 Relative survival of *S. enterica* in the biofilm and bulk water of chlorinated MDWDS ........................................... 184

Figure 6.15 Relative survival of *S. enterica* in the biofilms of non-chlorinated and chlorinated MDWDS ................................. 185

Figure 6.16 Relative survival of *S. enterica* in the bulk water of non-chlorinated and chlorinated MDWDS ................................. 186

Figure 6.17 Relative survival of *E. coli* and *S. enterica* in the biofilms formed in the non-chlorinated MDWDS ................................. 187

Figure 6.18 Relative survival of *E. coli* and *S. enterica* in the bulk water of non-chlorinated MDWDS ........................................... 187

Figure 6.19 Relative survival of *E. coli* and *S. enterica* in the biofilms formed in chlorinated MDWDS ........................................... 188

Figure 6.20 Relative survival of *E. coli* and *S. enterica* in the bulk water of chlorinated MDWDS ........................................... 188
