ACKNOWLEDGEMENTS

This work is effectively an outcome of the priceless co-operation and good wishes from several people and I take this opportunity to thank them all.

First and foremost, I extend my humblest heartfelt gratitude to Dr. Kiran K Sharma, my alma mater, for nurturing and reviving me from the lowest phases of my life by being supremely humane and kind while extending comprehensive and holistic support. Being my supervisor during this study his absolute faith and exceptional back-up, to speak my mind freely, has helped me grow immensely as a sensible and responsible researcher. I would be eternally thankful to you sir, for the wholesome support I received from you.

I sincerely thank Dr. M. Lakshmi Narasu, also my supervisor, for her unconditional support while facilitating the due process of my Ph.D. registration and transfer of UGC-SRF fellowship to JNTUH. I also gratefully acknowledge and sincerely thank Dr. Vincent Vadez for guiding in planning and executing all the physiological experiments carried out during this study. I thank Dr. S.N. Nigam, for the valuable guidance offered during the introgression studies.

I would always treasure the unparallel support and rapport I had with Dr. Pooja Bhatnagar-Mathur, while I pursued further the work initialized by her. I greatly acknowledge her close association in all the brainstorming while prioritizing objectives and planning the experiments besides keeping this project as the top priority, which eventually was very helpful in the cause of significant advancements accomplished during the study. I also sincerely thank her for the financial support I received as a stipend from the project soon after the completion of my UGC fellowship.

It was a pleasure working along-side Dr. D. Srinivas Reddy, as we developed along great compatibility and mutual trust. I sincerely thank him for brotherly interactions and technical support I received from him, particularly in trouble-shooting during molecular studies.

I take this opportunity to thank all my friends and lab mates, G.Vani, Gaurav, Krithika, Sowmini, Prasanthi, Kalyani, Madhurima, Venkatesh, Chavi, Susritha, Sailesh, Jyostna, Sunita and Namita, for their valuable support and affectionate encouragement during the study.
I warmly acknowledge the indispensable support received from the staff of genetic transformation lab (GTLab), crop physiology, and groundnut breeding unit, ICRISAT, viz., Late. Jagan Mohan Reddy, Md. Yousuf, Pandary, Lakshmi Narayan, Manemma, Lakshmi, Kanaka Reddy, Anjaiah, Rekha and Papaiah. Smooth conductance of the experiments in greenhouse and field was made possible by the consistent technical support of the concerned personnel from Farm and Engineering Services, ICRISAT, viz., Mathews, Anis Akhtar, Narasi Reddy, Tilak singh and Hanumanth Rao. I warmly thank all for their timely response and help.

I also greatly acknowledge the sensible support I received from Dr. Ratnakumar, during the drydown experiments.

I thank Dr. William D. Dar, Director, ICRISAT, for providing me the opportunity for carrying out my research work at this esteemed state of art and resourceful institute. I also thank UGC, India, for the financial support given to pursue my Ph.D. research work.

Acknowledgement of any enormity would not suffice for the continuous and extensive moral support that I received from each member of my immediate and extended family, including my dear parents for their much needed irrational support, extremely helpful brother, sister and loving in-laws, for which I would be eternally indebted to them.

Lastly, the two most important individuals of my life, my loving daughter Laavanya and wife Gunjan, who had been with me through all the testing times; had been a consistent source of motivation and only reason for me to sustain, without whom this work would not have been possible. I unassumingly dedicate this thesis to them.
