Abstract xiv

1 Introduction 1
   1.1 Monsoon Intraseasonal Oscillation (MISO) .......................... 1
   1.2 Relationship between MISO and Monsoon Variability .................. 4
   1.3 Large-scale dynamics, and northward propagation
       of MISO .................................................. 5
   1.4 Theories for northward propagation ..................................... 6
   1.5 Role of the Indian Ocean in MISO ..................................... 9
   1.6 Unique warming trend in the Indian Ocean ............................ 10
   1.7 The Onset, withdrawal, and length of the rainy season of the Indian summer
       monsoon ...................................................... 11
       1.7.1 The onset ............................................. 11
       1.7.2 The withdrawal ....................................... 12
       1.7.3 The length of the rainy season .............................. 12
   1.8 Different criteria to define the onset and withdrawal .................. 12
   1.9 Change in the background Sea Surface Temperatures (SSTs) of the world
       oceans after 1976/1977 ....................................... 13
   1.10 Outline of the thesis ............................................. 14

2 Data, Model, and Methods 17
   2.1 Datasets .................................................... 17
       2.1.1 Precipitation ......................................... 17
       2.1.2 Outgoing Longwave Radiation (OLR) ......................... 18
Contents

2.1.3 NCEP/NCAR Reanalysis data .............................................. 18
2.1.4 ECMWF Reanalysis data .................................................. 19
2.1.5 Sea Surface Temperature .................................................. 20
2.1.6 Coupled Model Intercomparison Project phase5 (CMIP5) model outputs .................................................. 20
2.2 ECHAM5 Model ............................................................... 21
2.3 Methods ........................................................................... 22
  2.3.1 Divergent component of moisture transport ....................... 22
  2.3.2 Statistical Techniques .................................................... 22
    2.3.2.1 Lagged Regression Techniques .................................. 23
    2.3.2.2 Finite domain wave number frequency analysis ............ 23
  2.3.3 Tropospheric temperature gradient to define the onset and withdrawal of the monsoon .................................................. 25

3 Modulation of Monsoon Intraseasonal Oscillations in the Recent Decade 26
  3.1 Introduction .................................................................... 26
  3.2 Data and Analysis method .................................................. 27
  3.3 AGCM and sensitivity experiments ....................................... 29
  3.4 Observational result .......................................................... 34
    3.4.1 Change in the mean SST over the Indian Ocean in the recent decade .................................................. 34
    3.4.2 Modulation of the MISO variance in the recent warming decade .................................................. 35
    3.4.3 Changes in the space-time characteristics of the MISO .................................................. 36
    3.4.4 Northward propagation characteristics in the recent decade .................................................. 37
    3.4.5 Air-sea interaction in the Indian Ocean .................................................. 42
  3.5 Solutions to the AGCM experiments ...................................... 43
    3.5.1 Mechanism proposed for the slow northward propagation .................................................. 45
    3.5.2 Mechanism proposed for the increased amplitude .................................................. 47
  3.6 Discussion and conclusions .................................................. 48

4 Modulation of Monsoon Onset and Withdrawal in Recent Decades 51
  4.1 Introduction .................................................................... 51
  4.2 Data and Methodology ........................................................ 55
  4.3 Observational analysis ......................................................... 57
    4.3.1 Interannual variations of onset date, withdrawal date and length of rainy season for Indian summer monsoon .................................................. 57
    4.3.2 The withdrawal date and sea surface temperatures .................................................. 61
    4.3.3 The onset date and sea surface temperature .................................................. 65
    4.3.4 The Indian summer monsoon withdrawal and upper tropospheric temperatures .................................................. 68
    4.3.5 Association of monsoon withdrawal with Indian Ocean Dipole (IOD) and El Niño Southern Oscillation (ENSO) .................................................. 70
Contents

4.4 Atmospheric General Circulation Model (AGCM) sensitivity experiments 71
4.5 Summary 78

5 MISOs in CMIP5 Coupled General Circulation Models (GCMs) and its Modulations under Global Warming Scenario 80
5.1 Introduction 80
5.2 Model, data, and methodology 82
5.3 Evaluation of the Mean Precipitation Simulated in the CMIP5 Models 85
5.4 Simulation of MISO variance pattern 90
5.5 Simulation of the propagation features of the MISO 94
  5.5.1 Equatorial eastward propagating mode 94
  5.5.2 Northward propagating mode 96
5.6 Space time structure of MISO 99
5.7 Simulation of the quadrupole structure of the MISO 102
5.8 Modulation of MISOs under future warming scenario 106
5.9 Projected MISO variance 107
5.10 Projected space-time characteristics of the MISO 107
5.11 Projected change in the propagation characteristics of MISO 108
5.12 Modulation of onset, withdrawal and LRS of Indian summer monsoon in the global warming scenario 110
  5.12.1 Modulation of onset dates under global warming scenario 111
  5.12.2 Modulation of withdrawal dates under global warming scenario 113
  5.12.3 Modulation of LRS under global warming scenario 113
5.13 Mechanism responsible for the changes in onset, withdrawal and LRS under global warming scenario 115
5.14 Summary 118

6 Conclusions and Future Scope 122
6.1 Conclusions 122
  6.1.1 Modulation of MISOs in the recent decade 122
  6.1.2 Modulation of monsoon onset and withdrawal in recent decades 123
  6.1.3 MISOs in CMIP5 coupled GCMs and its modulations under global warming scenario 124
6.2 Future Scope 125
