List of tables

Table
1: Age and sex distributed data on tuberculosis mortality at different points of time and setting . 5
2: Age and sex segregated prevalence data in the Indian studies ...................................................... 8
3: Identified risk factors associated with acquiring tuberculosis/mortality from studies conducted globally ...................................................................................................................................... 15
4: Identified risk factors associated with acquiring tuberculosis/mortality from Indian studies .... 19
5: Treatment regimen under RNTCP ................................................................................................. 26
6: List of variables and the source of data collected ........................................................................32
7: Profile of study cohort .................................................................................................................. 46
8: Gender difference in characteristics of the study cohort ............................................................. 49
9: Characteristics of untraceable patients eighteen months after initiating DOTS ....................... 52
10: Multivariate analysis to characterize patients providing with incorrect personal information during registration .......................................................................................................................................................... 54
11: Causes of deaths in the cohort .................................................................................................. 54
12: Presenting symptoms prior to death ......................................................................................... 55
13: Survival status of cohort eighteen months after initiation of treatment .................................... 56
14: Survival analysis of patients based on age ................................................................................. 58
15: Survival analysis of patients based on sex .................................................................................. 61
16: Survival analysis of patients based on type of case .................................................................... 63
17: Survival analysis of patients based on baseline sputum smear status ......................................... 66
18: Survival analysis of patients based on treatment outcome ............................................................ 68
19: Survival analysis of patients based on HIV status ..................................................................... 71
20: Survival analysis based on presence of diabetes mellitus ................................................................ 74
21: Gender wise survival of patients aged less than or equal to 30 years and those more than 30 years eighteen months after initiation of DOTS .............................................................................. 77
22: Gender difference in survival of patients based on type of case eighteen months after initiation of DOTS .......................................................................................................................................................... 78
23: Gender difference in treatment outcome .................................................................................... 79
24: Gender difference in survival based on HIV status .................................................................... 80
25: CFR of the cohort across age groups .......................................................................................... 83
26: SMR across the age groups in the cohort ..................................................................................... 85
27: Risk factors for death among tuberculosis patients ..................................................................... 95
28: Multivariate analysis of risk factors for mortality for tuberculosis ............................................. 99
29: Gender differences in risk factors for mortality among pulmonary tuberculosis patients ...... 105
30: Multivariate analysis of risk factors of expired women patients who were on DOTS .......... 110
31: Characteristics of expired women patients compared to those who survived ..................... 116
32: Multivariate analysis of risk factors of expired women patients as compared to those who survived .......................................................................................................................................................... 121
33: Predictive value of risk factors associated with mortality among expired women patients ... 125
