What can I say about my advisor, Dr. A. Gopalakrishnan, who really helped get me in the door and placed trust in me for carrying out the work? He ‘adopted’ me even though I had very little knowledge of molecular techniques. I am forever grateful to him for giving me a chance. I feel very fortunate for allowing me to work “fairly independently”, but never had any doubts that I was making progress. I am especially indebted to him for providing invaluable advice in the laboratory and was an unending source of molecular knowledge throughout my degree. Sir, You are one of those rare people who possesses top notch skills and scientific intellect, yet has a personality that I enjoy being around. Thanks for your fantastic open door policy, faith, positivity, interest, tolerance, encouragement and patience.

I must express my sincere gratitude to Dr. V.S. Basheer, Senior Scientist, National Bureau of Fish Genetic Resources, who took time out of his busy schedules to provide feedback on my research work and he generously collected the majority of the samples used in this study and afforded me numerous opportunities to collect samples as well. He also graciously provided hours of advice for the completion of this work and contributed countless suggestions for improvement. Thank you so much and looking forward to continue getting the same support during my further studies.

I will forever be indebted to Dr. R.K. Tyagi, Head of the Division, Germplasm Conservation Division, National Bureau of Plant Genetic Resources, New Delhi for his encouragement, constant advice and support for completion of this work.

Thanks to Dr. T. Raja Swaminathan, Senior Scientist; Dr. P.R. Divya, Dr. A. Kathirvelpandian, Scientists (Senior scale), NBFGR Cochin Unit, Kochi for being great colleagues and friends, for their constant help and support and for all the great moments we spend together in the lab. Without their support and teaching I would not have been brave enough to try many of the things that helped me to be successful.

Special thanks to Ms. K.A. Sajeela, Ms. K.B. Sheeba, Mr. C.E. John, Mr. Rajkumar, Mr. Suraj, Mr. Rahul G. Kumar, Mr. K.K. Bineesh, Ms. C. Mohitha,
Acknowledgements

Ms. Linu, Ms. N.S. Jeena, Research Scholars, NBFGR Cochin Unit, Kochi for their help in the molecular biology works and deserves a special mention for sharing the long evenings, holidays in the laboratory, all the breaks with tea, snacks and humour and of course their friendship.

A special note of appreciation for Dr. P.K. Meher, who enthusiastically supported my interest in molecular systematics.

The help extended by Mr. Tirath Das Gupta and Mr. Rana, Indian Agricultural Research Institute, New Delhi is gratefully acknowledged for designing my photographs while skipping their lunch bites.

It is my gratification to express thanks to my senior colleagues, Drs. Kalyani Srinivasan, Veena Gupta, Anjali Kak, Sushil Pandey, Chitra Pandey, Nidhi Verma, Manju Upprety, A.D. Sharma, Ms. Rita Rani, Ms. Nirmala Dabral, National Bureau of Plant Genetic Resources, New Delhi for their constant motivation for completion of the thesis.

I would like to thank the Principal, Maharaja’s College, Ernakulam and Drs. T.P. Jameela, K.V. Reethamma and E. Chandran, former Heads and Dr. M.V. Shyamala Head, Department of Zoology, Maharaja’s college for the great atmosphere and their kind support and help in the academic, administrative matters whenever it was necessary.

I would like to thank all the people those who stood by me through the entire period and those who went along with me for a shorter time. Without them, this thesis would not have been possible.

My husband Pitty, he is a blessing that I do not deserve. I am not sure where I would be without him, but almost assuredly, it would not be here; that is, on the brink of receiving a doctoral degree at MG University. Pitty, you have kept me going through all the challenges in a very selfless and loving manner, and have taken on virtually all the ‘home responsibilities’. This degree really ought to have your name on it as much as mine because you did at least as much work – it was simply behind the scenes. Now that the crazy hours are past, I am truly looking forward to getting something more. I’m also proud of my son Reemu for spending several months without hugging me and let me be free to do my work. Without his support it would have not been possible.

I would be remiss if I did not thank God for all the blessings in my life, especially an upbringing by parents that were and are the best role models...
one could have. Thank you, Ma and Bapa, for raising me in this faith and modelling honesty, kindness, and perseverance in the face of challenges – especially, in facing such challenges with a calm demeanor. Your examples and your support and encouragement were valuable to me throughout. I would like to thank all my family members for their constant support throughout the duration of this study.

What are some of the things I WILL NOT miss about my journey for getting a Doctoral degree? I will not miss spending late nights in the lab. Neither will I miss spending night after night writing. I will not miss filling the tip boxes. However, I WILL miss all the great friends I have come to know in the lab and of course, the repeated instalments of great culinary servings of Nirmala Chechi that I had at my Guide's home.

And with that, I will close this long journey. It has been pretty arduous at times, but also very satisfying. As I said in the beginning, I am a very blessed woman and feel fortunate to have had the experience. I wonder which door will open next.
