LIST OF PLATES

1. Surfactant pollution in different parts of the world - some snapshots
2. Fluorescent pigmentation of *Pseudomonas aeruginosa* S15 under UV
3. *Pseudomonas aeruginosa* S15 on SBS medium
4. 16S rDNA typing of *Pseudomonas aeruginosa* S15
5. Varied pigmentation pattern of *Pseudomonas aeruginosa* S15
6. Zymogram analysis of alkylsulphatase
7. Range finding test of SDS on seed germination
8. Histopathologic analysis of Grass carp gills exposed to SDS
9. Biosurfactant production by S15 on Siegmund Wagner medium
10. Biosurfactant production of S15 on SCM medium
11. Drop collapse method
12. Emulsification of kerosene by rhamnolipid
13. Biofilm formation pattern of *Pseudomonas aeruginosa* S15 in different media determined as per microtitre plate assay
14. Plasmid isolated by different methods visualised on agarose gel electrophoresis
15. Plasmid curing detected in colonies patch plated on SBS medium
16. Visualization of plasmid by agarose gel electrophoresis after curing and transformation experiments
17. Nutrient agar plate showing isolated colonies of competent cell *E.coli* DH5α
18. SBS agar plate showing transformed cells of *E.coli* DH5α
19. Antibiotic profile of *P.aeruginosa* S15, nontransformant *E.coli* DH5α and transformant *E.coli* DH5α
20. Zymogram analysis of transformant *E.coli* and *Pseudomonas aeruginosa* S15 after native PAGE developed in Tris-HCl buffer containing SDS
21. Biosurfactant production by S15 and transformant *E.coli* DH5α on Siegmund Wagner medium
22. Amplification of plasmid associated genetic elements using *sdsA* and *sdsB* specific primers
23. Partial digestion of S15 plasmid with *BfuCl* enzyme
