Preface vii  

List of Tables xv  
List of Figures xvi  

1 Introduction 1  
1.1 X-ray Binary system 2  
1.1.1 Accretion Mechanism 3  
1.1.2 Classification of Binary systems 5  
1.2 Accretion Powered Pulsars and their Observational Properties 7  
1.2.1 Power Density Spectra 8  
1.2.2 Quasi Periodic Oscillations 10  
1.3 Rossi X-ray Timing Explorer 13  
1.3.1 PCA 14  
1.3.2 HEXTE 15  
1.3.3 ASM 16  

2 Quasi Periodic Oscillations in KS 1947+300 18  
2.1 Introduction 18  
2.2 Observations and Data 19  
2.2.1 Timing and Spectral Analysis 21  
2.3 Discussion 25  

3 Flares and Quasi Periodic Oscillations in 4U 1901+03 27  
3.1 Introduction 27  
3.2 Observation and Data Reduction 28  
3.3 Analysis and Results 29  
3.3.1 Light curve and Flares 29
Contents

3.3.2 Power Density Spectrum ........................................... 31
3.3.3 Spectral Analysis ................................................... 33
3.4 Discussion ............................................................. 34
  3.4.1 Flares ............................................................... 34
  3.4.2 Quasi Periodic Oscillations .................................... 35

4 Quasi Periodic Oscillations in 1A 118-616 ..................... 38
  4.1 Introduction .......................................................... 38
  4.2 Observations and Data ............................................. 40
    4.2.1 Power Density Spectrum .................................... 41
  4.3 Discussion ............................................................. 43

5 Quasi Periodic Oscillations in GX 304-1 ......................... 44
  5.1 Introduction .......................................................... 44
  5.2 Observation and Data reduction .................................. 45
    5.2.1 Power Density Spectrum .................................... 46
  5.3 Discussion ............................................................. 47

6 Estimation of the Magnetic Field of some Accretion Powered Pulsars using QPO Frequency and X-ray Luminosity .......... 50
  6.1 Introduction .......................................................... 50
  6.2 The Pulsars, Observations and Analysis ....................... 51
    6.2.1 Sources which show QPO feature as well as cyclotron absorption line ........................................ 52
    6.2.2 Sources which show only the QPO feature ............... 57
    6.2.3 Sources which show cyclotron absorption line and no QPO feature ............................................. 59
  6.3 Results & Conclusion ................................................ 59

7 Power Density Spectra of X-ray Pulsars and their Evolution .... 64
  7.1 Introduction .......................................................... 64
  7.2 Observation and Data Reduction .................................. 67
  7.3 Classification of Power Density Spectra of X-ray Pulsars .... 67
    7.3.1 PDS with Two or Multiple Component Power Law ........ 67
      7.3.1.1 Two Component Power Law with Stable PDS .......... 68
      7.3.1.2 Two Component Power Law with High Frequency Variations ............................................. 72
      7.3.1.3 Multiple Power Law with Stable PDS ............... 73
      7.3.1.4 Multiple Power Law with Intermediate Frequency Variations ............................................. 74
      7.3.1.5 Multiple Power Law with High Frequency Variations ............................................. 76
    7.3.2 PDS with Non-Power law shape ................................ 79
  7.4 Results .............................................................. 83

8 Broadening of the Pulse Frequency Peak and Intensity Dependence of Pulse Profiles ................................................. 85
Contents

8.1 Introduction .................................................. 85
8.2 Broadening of the Pulse Frequency Peak in 4U 1901+03 .......... 86
8.3 Broadening of the Pulse Frequency Peak in a few other Pulsars . . 88
8.4 Results and Conclusion ......................................... 88

9 Conclusion and Outlook ........................................ 94

Bibliography ..................................................... 97
