Contents

Introduction 8

Chapter 1. Preliminaries 15
  1.1. Concept of Integral equations 15
  1.2. Metric space and some of its properties 18
  1.3. Fuzzy set theory 22
  1.4. Interval arithmetic 23

Chapter 2. Fuzzy function space 25
  2.1. Introduction 25
  2.2. Fuzzy number space $E^n$ 26
  2.3. Fuzzy function space 30

Chapter 3. Banach Fixed Point Theorem for Fuzzy Space $E^n$ 33
  3.1. Introduction 33
  3.2. Application of Banach Fixed point theorem for Fuzzy sets 37

Chapter 4. Further Applications of Banach Fixed point Theorem for Fuzzy sets 44
  4.1. Existence and Uniqueness of solution for some Fuzzy Volterra Integral equations 44
  4.2. Initial value problem of Fuzzy Differential Equations (FDE) 50
4.3. Bounded solutions for Fuzzy Integral Equations 55

Chapter 5. Solution to Fuzzy Differential and Integral Equations 64

5.1. Neumann series and approximation 65

5.2. Solution of Fuzzy Volterra Integral equation by the method of successive substitution 91

5.3. Solution of the Fuzzy Fredholm integral equation by the method of successive substitutions 94

5.4. Solution of Fuzzy Volterra integral equation of second kind by the method of successive approximation 98

5.5. Solution of the Fuzzy Fredholm integral equation by the method of successive approximation 104

Chapter 6. Application of Fuzzy Integral Equations 108

6.1. Longitudinal vibrations of a rod 113

Appendix A. 116

A.1. Relation between Fuzzy differential and Integral Equations 116

A.2. Particular case 119

A.3. Conversion of Fuzzy initial value problem into Fuzzy Volterra integral equation and vice versa 120

A.4. Conversion of Fuzzy boundary value problem to a Fuzzy Fredholm integral equation and vice versa 123
