List of Tables

Table: 2.1
List of heterocystus cyanobacterial strains used in this study 32

Table: 2.2
Nucleotide distance (diagonal) identities between the studied isolate and twenty other closest homologs microbe 34

Table: 2.3
Growth behavior of N. muscorum under single and multiple stresses. O.D. taken at 660nm 37

Table: 2.4
Specific growth rate (µ) per day of Nostoc muscorum under single and multiple stresses 38

Table: 2.5
Growth behavior of A. variabilis under single and multiple stresses. O.D. taken at 660nm 39

Table: 2.6
Specific growth rate (µ) of A. variabilis per day under single and multiple stresses 40

Table: 2.7
Growth behavior of N. muscorum under pesticides and herbicides stresses. O.D. was taken at 660nm for the respective days 41

Table: 2.8
Growth behavior of A. variabilis under pesticides and herbicides stresses. O.D. taken at 660nm 42

Table: 2.9
Specific growth rate (µ) of N. muscorum and A. variabilis under pesticides and herbicides stresses 42

Table: 2.10
Growth in terms of Protein concentration in N. muscorum under single and multiple stresses 44

Table: 2.11
Growth in terms of Protein concentration in A. variabilis under single and multiple stresses 46

Table: 2.12
Growth in terms of Protein concentration in N. muscorum under pesticide and herbicide stress 47
**Table: 2.13**  
Growth in terms of Protein concentration in *A.variabilis* under pesticide and herbicide stress

**Table: 3.1**  
Effect on chlorophyll a synthesis under influence of metals and NaCl on *N.muscorum*

**Table: 3.2**  
Effect on chlorophyll a synthesis under influence of metals and NaCl on *A.variabilis*

**Table: 3.3**  
Effect on chlorophyll a synthesis under influence of pesticide and herbicide on *N.muscorum*

**Table: 3.4**  
Effect on chlorophyll a synthesis under influence of pesticide and herbicide on *A.variabilis*

**Table: 3.5**  
Effect on Phycoerythrin synthesis under influence of metals and NaCl on *N.muscorum*

**Table: 3.6**  
Effect on Phycoerythrin synthesis under influence of metals and NaCl on *A.variabilis*

**Table: 3.7**  
Effect on phycoerythrin synthesis under influence of pesticide and herbicide on *N.muscorum*

**Table: 3.8**  
Effect on phycoerythrin synthesis under influence of pesticide and herbicide on *A.variabilis*

**Table: 3.9**  
Effect on Phycocyanin synthesis under influence of metals and NaCl on *N.muscorum*

**Table: 3.10**  
Effect on Phycocyanin synthesis under influence of metals and NaCl on *A.variabilis*

**Table: 3.11**  
Effect on Phycocyanin synthesis under influence of pesticide and herbicide on *N.muscorum*
Table: 3.12
Effect on Phycocyanin synthesis under influence of pesticide and herbicide on A.variabilis

Table: 3.13
Effect on Carotenoid synthesis under influence of metals and NaCl on N.muscorum

Table: 3.14
Effect on Carotenoid synthesis under influence of metals and NaCl on A.variabilis

Table: 3.15
Effect on Carotenoid synthesis under influence of pesticide and herbicide on N.muscorum

Table: 3.16
Effect on Carotenoid synthesis under influence of pesticide and herbicide on A.variabilis

Table: 4.1.a
Effect of different treatments of metals and NaCl on the SOD activity of N.muscorum

Table: 4.1b
Effect of different treatments of metals and NaCl on the SOD activity of A.variabilis

Table: 4.1.c
Effect of different treatments of pesticide and herbicide on the SOD activity of N.muscorum

Table: 4.1.d
Effect of different treatments of pesticide and herbicide on the SOD activity of A.variabilis

Table: 4.2.a
Effect of different treatments of metals and NaCl on the CAT activity of N.muscorum

Table: 4.2.b
Effect of different treatments of metals and NaCl on the CAT activity of A.variabilis

Table: 4.2.c
Effect of different treatments of pesticide and herbicide on the CAT activity of N.muscorum
Table: 4.2.d
Table Effect of different treatments of pesticide and herbicide on the CAT activity of *A.variabilis*

Table: 4.3.a
Effect of different treatments of metals and NaCl on the APX activity of *N.muscorum*

Table: 4.3.b
Effect of different treatments of metals and NaCl on the APX activity of *A.variabilis*

Table: 4.3.c
Table Effect of different treatments of pesticide and herbicide on the APX activity of *N.muscorum*

Table: 4.3.d
Effect of different treatments of pesticide and herbicide on the APX activity of *A.variabilis*

Table: 4.4.a
Effect of different treatments of metals and NaCl on the MDA activity of *N.muscorum*

Table: 4.4.b
Effect of different treatments of metals and NaCl on the MDA activity of *A.variabilis*

Table: 4.4.c
Effect of different treatments of pesticide and herbicide on the MDA activity of *N.muscorum*

Table: 4.4.d
Effect of different treatments of pesticide and herbicide on the MDA activity of *A.variabilis*

Table: 4.5.a
Effect of different treatments of metals and NaCl on the NO activity of *N.muscorum*

Table: 4.5.b
Effect of different treatments of metals and NaCl on the NO activity of *A.variabilis*

Table: 4.5.c
Effect of different treatments of pesticide and herbicide on the NO activity of *N.muscorum*
### Table: 4.5.d
Effect of different treatments of pesticide and herbicide on the NO activity of *A. variabilis*

### Table 5.1a
Nitrite uptake activity of *Nostoc muscorum* under single and multiple stresses

### Table 5.1b
Nitrite uptake activity of *Anabena variabilis* under single and multiple stresses

### Table 5.1c
Nitrite uptake activity of *Nostoc muscorum* under pesticide and herbicide stresses

### Table 5.1d
Nitrite uptake activity of *Anabena variabilis* under pesticide and herbicide stresses

### Table: 5.2a
Nitrate reductase activity of *Nostoc muscorum* under single and multiple stresses

### Table: 5.2b
Nitrate reductase activity of *Anabena variabilis* under single and multiple stresses treatment

### Table: 5.2c
Nitrate reductase activity of *Nostoc muscorum* under pesticide and herbicide stresses

### Table: 5.2d
Nitrate reductase activity of *Anabena variabilis* under pesticide and herbicide stresses

### Table: 5.3a
Nitrite reductase activity of *Nostoc muscorum* under single and multiple stresses

### Table: 5.3b
Nitrite reductase activity of *Anabena variabilis* under single and multiple stresses

### Table: 5.3c
Nitrate reductase activity of *Nostoc muscorum* under pesticide and herbicide stresses
**Table: 5.3d**
Nitrate reductase activity of *Anabena variabilis* under pesticide and herbicide stresses. The medium was supplied with 0.1M Potassium nitrate.

**Table: 5.4a**
Nitrate uptake activity of *Nostoc muscorum* under various stresses.

**Table: 5.4b**
Nitrate uptake activity of *Anabena variabilis* under various stresses.

**Table: 5.4c**
Nitrate uptake activity of *Nostoc muscorum* under pesticide and herbicide stresses.

**Table: 5.4d**
Nitrate uptake activity of *Anabena variabilis* under pesticide and herbicide stresses.

**Table: 6.1**
Concentration of metal uptake (µg/ml) in presence of metal and salinity stress in *Nostoc muscorum*.

**Table: 6.2**
Concentration of metal uptake (µg/ml) in presence of metal and salinity stress in *Anabena variabilis*.

**Table: 6.3**
Concentration present before and after the accumulation of pesticide and herbicide by cyanobacteria.

**Table: 6.4**
Effect of *N.muscorum* on germination of rice seeds.

**Table: 6.6**
Yield data of field demonstration of *Nostoc muscorum* as biofertilizer conducted in paddy field.

**Table: 6.7**
Effect of *A.variabilis* on germination of rice seeds.

**Table: 6.8**
Yield data of field demonstration of *Nostoc muscorum* as biofertilizer conducted in paddy field.
## List of Figures

**Fig:1.1**  
Structure of cyanobacterial cell  

**Fig:2.1**  
(a) Colonies of cyanobacterial isolate in pure form  
(b) Microscopic view of the isolate  

**Fig:2.2**  
Axenic cultures of cyanobacterial isolate in log phase  

**Fig:2.3**  
DNA band of cyanobacterial isolate on Agarose gel  

**Fig:2.4**  
Phylogenetic Tree made in MEGA 3.1 software using Neighbor Joining method  

**Fig:2.5**  
Maintenance of Axenic cultures of *N.muscorum* and *A.variabilis* under  
(a) Metals  
(b) Metal and salinity  
(c) Pesticide and herbicide stresses  

**Fig:2.6**  
Growth behavior of *N.muscorum* under  
(a) Single Stress  
(b) Multiple Stresses  

**Fig:2.7**  
Specific growth rate *N.muscorum* under single and multiple Stresses  

**Fig:2.8**  
Growth behavior of *A.variabilis* under  
(a) Single Stress  
(b) Multiple Stresses  

**Fig:2.9**  
Specific growth rate *A. variabilis* under single and multiple stresse  

**Fig:2.10**  
Growth behavior of  
(a) *N.muscorum*  
(b) *A.variabilis* under pesticide & herbicide stresses  

**Fig:2.11**  
Specific growth rate *N.muscorum* and *A.variabilis* under pesticide and herbicide stresses
**Fig: 2.12**
Protein concentration in *Nostoc muscorum* in response to single stress

**Fig: 2.13**
Protein concentration in *N. muscorum* in response to multiple stresses

**Fig: 2.14**
Protein concentration in *A. variabilis* in response to single stress

**Fig: 2.15**
Protein concentration in *A. variabilis* in response to multiple stresses

**Fig: 2.16**
Protein concentration in
(a) *N. muscorum*
(b) *A. variabilis* in response to pesticide and herbicide stress

**Fig: 2.17**
Effects on polypeptide pattern on total protein. *N. muscorum*
(a) single (b) multiple stresses. *A. variabilis*
(c) single (b) multiple stresses
Pesticide and herbicide stresses (e) *N. muscorum* (f) *A. variabilis* as analyzed on SDS-PAGE. C is control culture with no stress. M represents the molecular weight marker. Equal amounts of proteins were loaded into each well

**Fig: 2.18**
Morphological and structural changes in *N. muscorum* under single stress

**Fig: 2.19**
Morphological and structural changes in *N. muscorum* under multiple stress

**Fig: 2.20**
Morphological and structural changes in *A. variabilis* under single stress

**Fig: 2.21**
Morphological and structural changes in *A. variabilis* under multiple stress

**Fig: 2.22**
Morphological and structural changes in *N. muscorum* under pesticide and herbicides stresses

**Fig: 2.23**
Morphological and structural changes in *A. variabilis* under pesticide and herbicides stresses
