ACKNOWLEDGEMENT

I am deeply indebted to Jeevan Raksha Shri. R. SETHURAMAN, the chairman of our college who immediately granted permission to start my research work at Alagappa University, Karaikudi. I always remember his kind enquiries about the progress of my research work periodically, despite his busy schedule. His magnanimity in making necessary software (like MATLAB, NISA, etc.,) available in departments of electrical sciences inspires researchers of our college to do more work.

I thank with respectful homage, our Director Prof. T.R. Rajagopalan (late), who nursed a dream of having all teachers of our college with doctoral degree and on whose name our chairman has started a research cell.

I am very much grateful to Dr. K. CHANDRASEKHARARAO, for his sustained help, guidance, scrutiny of all chapters, critical comments in carrying out the present study and for the preparation of this thesis.

I am grateful to Dr. V. RAMAMURTHY, not only for his help but also for inspiring me with useful discussions even in odd hours at night and for verification of results. His suggestions of software packages to draw diagrams and to do computations have greatly helped me.
I am thankful to Prof. R. KANDASAMY, the principal of our college for his constant encouragement. My sincere thanks are also due to Prof. A.R. RAMASAMY who encourages the hard working researchers.

I also acknowledge with pleasure the useful and lively discussion I had with Prof. RENGARAJAN and Dr. SRIVATSAVA of Chemical Engineering Department.

Last but not least, my thanks are due to Rajiv Shankaran, IV B.E., (IT) Madhusudhanan M.E., (PED), students of our college who worked with me in MATLAB in drawing diagrams and in preparing legends.
